Vaccine Shortages, Viral Outbreaks, Widespread Illness, More Deaths	Health-Dystopian	It's September 2022. Routine childhood vaccines are now optional in the United States, and government officials, after hastily compiling an immense research registry of autistic people, have added the neurodevelopmental condition to the list of compensable vaccine injuries, thereby opening up vaccine makers to an onslaught of lawsuits. Facing decreased demand and increased litigation, some vaccine makers have pulled their shots from the domestic market entirely. Outbreaks are spreading across the country, sickening tens of thousands of people. too many are dying, especially children, pregnant people, and older adults. Something similar is unfolding around the world because the U.S. government ended vaccinations for millions globally. This is one scenario America faces if we continue down the path being backtracked by Robert F. Kennedy Jr. and other anti-vaccine activists at the Department of Health and Human Services. And when I called up vaccine experts to ask whether my dystopian fears made me a doomer, they replied that this grim scenario was plausible—and that it could get even worse.	https://www.yahoo.com/news/vaccine-shortages-viral-outbreaks-widespread-illness-more-deaths	2025/07/04	
Republicans now own America's broken health care system	Health-Political	One recent analysis by a group of Harvard-affiliated researchers of the House Republicans' version of the budget bill (which included the same general outline, though some of the provisions have been tweaked in the Senate) concluded that 700,000 fewer Americans would have a regular place to get medical care as a result of the bill. Upward of 200,000 fewer people would get their blood cholesterol or blood sugar checked; 150,000 fewer women would get their recommended mammograms. Overall, the authors project that between 8,200 and 24,600 additional Americans would die every year under the Republican plan. Other analyses came to the same conclusion: Millions of Americans will lose health insurance and thousands will die.	https://www.yahoo.com/news/republicans-now-own-americas-broken-20	2025/07/04

		Red and her team analyzed anonymous data from 30 agencies, non-profit partners and public surveys to come up with the 2024 figures, which estimates 500,000 people were victims of labor trafficking. A significant number are believed to be undocumented migrants, who lack many of the legal protections of authorized workers and are considered especially vulnerable to exploitation. The Florida Policy Institute estimates there are almost 400,000 undocumented workers in key industries including tourism, agriculture and construction. Immigration advocates, lawyers, as well as the general population, are reporting a surge in racial profiling from law enforcement officials in L.A. Many of these targeted individuals are U.S. citizens or lawful residents, meaning ICE agents should have no right to try and seize them — but they still do. "We've been seeing...people who are U.S. citizens or lawful residents getting stopped, getting asked questions, even detained, or arrested," Professor Marissa Montes, director of Loyola Law School's Immigrant Justice Clinic, told Boyle Heights Beat. Scientists have been scrambling to discover what happened; now the culprits are emerging. A research paper published by the US Department of Agriculture (USDA), though not yet peer-reviewed, has found nearly all colonies had contracted a bee virus spread by parasitic mites that appear to have developed resistance to the main chemicals used to control them. Opinion - How Texas is wielding freedom of speech as a political weapon	freedom of speech Fuck that department	In 2018, it enacted legislation seeking to promote a robust and uninhibited exchange of ideas in its public colleges and universities. Apply called the Protected Expression on Campus Act, that law required higher education institutions to develop and promulgate policies protecting freedom of speech and assembly and to make those policies public. It prohibited them from preventing students or faculty from inviting speakers to campus because of the controversy their visits might cause, and mandated that students who interfere with the free speech activities of others be subject to university discipline. And it took the additional step of saying that outdoor spaces on campus would be "traditional public forums." Elon Musk loyalists at the Department of Government Efficiency are "fighting" to preserve their work and tensions with the White House following the billionaire's fallout with President Donald Trump, according to a report. DOGE's work is reportedly being scrutinized more closely by White House officials and drastic cuts are being revealed in some instances. The Department of Veterans Affairs has this week backed down from its plans to cut 83,000 jobs, spearheaded by DOGE, after public outcry. DOGE aggressively slashed the federal workforce and cut government programs in an effort to trim the federal budget. But the group's tactics were met with lawsuits and legal challenges. Musk left the federal government and then began an online fight with Trump over his proposed spending bill that is set to add billions to the national debt. Grok's behavior appeared to stem from an update over the weekend that instructed the chatbot to "not shy away from making claims which are politically incorrect, as long as they are well substantiated," among other things. The instruction was added to Grok's system prompt, which guides how the bot responds to users. XAI removed the directive on Tuesday. Patrick Hat, who teaches data ethics and machine learning at George Washington University, said he's not surprised Grok ended up spewing toxic content, given that the large language models that power chatbots are initially trained on unfiltered online data. https://www.yahoo.com/news/opinion-how-texas-wielding-freedom-speech-1 https://www.yahoo.com/news/elon-musk-doge-bro-war-white-house-1240470581	2025/07/08

Trump Says He's 'Looking At' Federal Takeover Of Washington, D.C.	Government / Authoritarianism	President Donald Trump said Tuesday he's weighing a federal takeover of Washington, D.C., spouting bogus claims about rampant crime in the nation's capital, and hinted he could pursue the same with New York City. "We have tremendous power at the White House to run places when we have to," Trump then said before disclosing he's already "testing" a plan to take over Washington. FEMA Acting Administrator David Richardson has been absent during the federal response to the floods in Texas, prompting concerns about his leadership. Richardson hasn't visited the site of the floods, the deadliest in the U.S. in a quarter century, ending a longstanding tradition of FEMA leaders being publicly available following natural disasters. The Social Security Administration is pulling workers from its field offices to man the growing number of calls as its 1-800 number. The agency serves 72 million Americans, and in the last five months, it has received more than 8.6 million calls a month on average, according to data obtained by The Washington Post. These callers wait an average wait time of 90 minutes. The Supreme Court on Tuesday cleared the way for the Trump administration to fire federal workers. Justice Ketanji Brown Jackson dissented from the unsigned opinion, calling it the "wrong decision at the wrong moment, especially given what little this Court knows about what is actually happening on the ground." She warned that such an executive action "promises mass employee terminations, widespread cancellation of federal programs and services, and the dismantling of much of the Federal Government as Congress has created it." A man who opened fire at the entrance of a U.S. Border Patrol facility in McAllen, Texas, early Monday was fatally shot by law enforcement officials, according to the Department of Homeland Security. Two officers and a Border Patrol employee were injured as the 27-year-old man shot dozens of rounds at the building. Elbridge Colby, the Pentagon's top policy chief under Hegseth, has blindsided senior administration officials and foreign allies alike with a series of rapid-fire foreign policy moves, according to multiple people familiar with the matter who spoke to Politico. Colby, 45, who is spearheading the next National Defense Strategy slated for release in August, reportedly advanced the proposal that led Hegseth to pause military assistance to Ukraine, without first notifying the White House. The decision caught many within the administration off guard, CNN reported, and was later publicly reversed by President Donald Trump. The Education Department dismissed more than 3,400 civil rights complaints in about three months under the Trump administration, per a July court filing. The Education Department has pledged to clear its backlog of civil rights complaints despite closing half of the offices that investigate the allegations. President Donald Trump has avoided talking about his plan to scrap the federal disaster response agency after the catastrophic flash flood in Texas that killed more than 100 people, including children attending a girls-only camp. Asked shortly after the disaster whether he still intended to phase out the Federal Emergency Management Agency, Donald Trump said it wasn't the right time to talk about it. Nor did he mention such phasing a day after he'd met with his Cuba task force on Tuesday. Once-finger-ticks — an alligator-moated detention camp, deportations to war zones, denaturalization of immigrant citizens — are now being proudly embraced at the highest levels of the U.S. government. Trump's immigration toolkit has expanded since March, as his aides push for a dramatically higher pace of arrests and deportations. Trump federalized the National Guard in California and deployed troops in Los Angeles to protect federal ICE agents, giving the military a rare and highly contentious role in immigration raids. The Supreme Court has allowed the Trump administration to deport undocumented immigrants to non-origin countries — including war-torn nations such as South Sudan and Libya. Hundreds of migrants are being held in Guantanamo Bay, Cuba. This week, Trump claimed that "consequential work" is underway to reopen Alcatraz — the descript former island prison in San Francisco, now a tourist site. https://www.axios.com/2025/07/08/supreme-court-trump-fire-federal-av https://www.axios.com/2025/07/07/texas-border-patrol-facility-shooting- https://www.yahoo.com/news/hegseth-aide-31-ming-off-just-about-everyone-with-151721710.html https://www.axios.com/2025/07/08/education-department-civil-rights-ca https://www.yahoo.com/news/trump-avoids-talk-scrapping-fema-after-more-than-100-killed-in-texas-flash-flood-17021 https://www.axios.com/2025/07/08/trump-migrants-alligator-camp-ra-de	2025/07/10	Trump, Washington DC, federal control, authoritarianism, politics

How to retrain your brain to crave exercise more than screen time - NPR	Health/Behavior	I recently spoke with a dozen current and former ICE agents and officers about morale at the agency since Trump took office. Most spoke on the condition of anonymity, for fear of losing their job or being subjected to a polygraph exam. They described varying levels of dissatisfaction but weren't looking to complain or expecting sympathy—certainly not at a time when many Americans have been disturbed by video clips of masked and hooded officers seizing immigrants who were not engaged in any obvious criminal behavior. The frustration isn't yet producing mass resignations or major internal protests, but the officers and agents described a workforce on edge, vilified by broad swaths of the public and bullied by Trump officials demanding more and more.	https://www.axios.com/2025/07/08/ice-agents-and-officers-abuse-morale-at-the-agency-since-trump-took-office	2025/07/10

Pentagon policy chief's rogue decisions have irked US allies and the Trump administration	Military / Global Relations	Elbridge Colby spent the last several years in Washington making a name for himself as an experienced, restraint-minded foreign policy leader eager to focus the U.S. military away from Europe and toward the Indo-Pacific. But since joining the second Trump administration as the Pentagon's top policy chief, Colby has made a series of rapid-fire moves that have blindsided parts of the White House and frustrated several of America's foreign allies, according to seven people familiar with the situation. All were granted anonymity to speak freely about Trump administration dynamics. Flanked by a team of handpicked policy experts and staff from Capitol Hill, Colby has gotten out ahead of the administration on several major foreign policy decisions. The head-spinning catalogue of warnings may have been aimed at distracting from the increasing unpopularity, according to opinion surveys, of Trump's agenda, some analysts say. But they also served as further alarm bells for the state of US democracy five-and-a-half months into a presidency that has seen a relentless assault on constitutional norms, institutions and freedom of speech.	https://www.yahoo.com/news/pentagon-policy-chief-rogue-decisions-4		Pentagon, Trump, foreign policy, defense, internal conflict	
If the US president threatens to take away freedoms, are we no longer free?	Nazi checklist	"Trump is making clear that if he can do that to the world's richest man, he could certainly do it to you," said Ian Baslin, co-founder and executive director of Protect Democracy. "It's important, if we believe in the rule of law, that we believe in it whether it is being weaponized against someone that we have sympathy for or someone that we have lost sympathy for." But it's not just a new prison, Alcatraz or otherwise. I visited four continents to write a global history of concentration camps. This facility's purpose fits the classic model: mass civilian detention without real trials targeting vulnerable groups for political gain based on ethnicity, race, religion or political affiliation rather than for crimes committed. And its existence points to serious dangers ahead for the country. This camp stands apart from other immigration detention facilities for a few reasons. First, its projected capacity of 5,000 beds is several times the average detention center (though Immigration and Customs Enforcement is looking at even larger facilities). Its improved tents and chain-link cages put detainees on display reminiscent of El Salvador's CECOT prison. And it is billed as a "temporary" camp, with the theory being that the administration can seamlessly process massive numbers of detainees with rapid-fire judicial hearings by National Guard members-turned-immigration judges. In practice, this is unlikely to go smoothly.	https://www.yahoo.com/news/us-president-threatens-away-freedoms-1	2025/07/07		
Don't call it 'Alligator Alcatraz.' Call it a concentration camp.	Nazi checklist	Experts are concerned about the dangerous conditions at Alligator Alcatraz: the immigrant detention center that opened Tuesday in the Florida Everglades. Hurricanes, flooding, and mosquitoes pose a more dire threat to people incarcerated there than the alligators and snakes that President Donald Trump has "poked" about. Built in eight days, the facility consists of large tents, bunk beds, and chain link fences that form cages to hold about 5,000 people. It has already flooded once. Despite the rudimentary setup, it will cost \$450 million a year to run, according to Department of Homeland Security Secretary Kristi Noem.	https://www.marbc.com/story/marbc-opinion/immigration-alligator-al	2025/07/07		
'Alligator Alcatraz' Detention Center Poses Serious Risks to Immigrants Beyond Just Alligators	Nazi checklist	They remember how he used Florida taxpayers' money for a stunt baiting dozens of Venezuelans to board a flight in Texas with false promises of accommodation and jobs, then dumped them in Massachusetts, promptly followed by the launch of a line of sardonic "DeSantis Airlines – bringing the border to you" apparel, drinks glasses and coffee mugs. "Again, it proves that cruelty was always the point," Maxwell Frost, a Democratic Florida congressman, told the Guardian after the president and governor visited the swamp on Tuesday to boast about how awful the camp will be for those held there.	https://www.yahoo.com/news/alligator-alcatraz-detention-center-poses-1	2025/07/08		
Trump's 'Alligator Alcatraz' reveals the ongoing cruelty towards migrants in US	Nazi checklist	"Selling hats and merchandise for a place that is about to become a hell on earth for thousands of people who are going to be subjected to some of the worst conditions and human rights abuses you could think of is disgusting. It was an odd message. For one thing, plenty of major bills have passed in the House with unanimous partisan support, so it wasn't as if Thursday's vote was somehow unprecedented. For another, the GOP's reconciliation package didn't pass 218-212; it passed 218-214. Or put another way, by Trump's estimation, the Democratic minority in the chamber, in a rather literal sense, didn't count. ... Right off the bat, it's worth noting that the comments generated headlines because they were so unusual. In the American tradition, elected leaders, especially around Independence Day, have never voiced public "hatred" for those who dare to disagree with them. It was a timely reminder that Trump apparently doesn't see himself as the president of the whole country, so much as he sees himself as the head of "Red America." But stepping back, as important as these elements are, there's another angle to this that arguably matters more. Different political scientists define the nuances of authoritarianism in different ways, but I think most would agree that a hallmark of any despotic regime is the delegitimization of political opposition. The Trump administration is now holding undocumented immigrants from 26 nations and six continents, at the notorious Guantanamo Bay naval base and prison in Cuba, as part of its push to rapidly expand U.S. immigration detention and deportation infrastructure. That injection of taxpayer cash makes the law enforcement agency one of the most expensive police forces in the world, outpacing most foreign military budgets. But hitting that 10,000 target is going to be a challenge, if not impossible, according to experts. And, without any guardrails to screen how those agents are hired and who exactly is filling those roles, the government may be setting itself up to repeat critical past mistakes. "No healthy law enforcement agency can grow quickly. And ICE is far from a healthy law enforcement agency," according to journalist Garrett Graff, who spent several years investigating the combustible expansion of Border Patrol into a "green monster" before and during the first Trump administration.	https://www.yahoo.com/news/trump-alligator-alcatraz-reveals-ongoing-1	2025/07/08

Trump taps 'alpha male' MAGA influencer as ambassador	Political Cesspool	This isn't just a crisis. It's a cycle of death that Johnson has set into motion. No climate protections, so the storms get worse. No NOAA alerts, so there's no warning. No hospitals, so there's no help. No Medicaid, so there's no healing. No SNAP, so there's no food. And repeat the cycle in another part of places like tornado alley. Johnson may kneel on the House floor and whisper prayers, but he is the architect of this disaster. And when the floodwaters rise, the crisis turn or are blown away, and the hospitals close for good, the prayers from Johnson won't save anyone. Texas Sen. Ted Cruz slashed funding for the National Oceanic and Atmospheric Administration mere days before his state was hit by deadly flash floods. According to a report from The Guardian, Cruz amended President Donald Trump's "big, beautiful bill" to end a \$150M fund that sought to "accelerate advances and improvements in research, observation systems, modeling, forecasting, assessments, and dissemination of information to the public." The ultimate goal of the federally funded program was to create better forecasts with more lead time. Considering the numerous whoppers former Rep. George Santos made before and after entering office, it makes sense that his last public statement before going to prison would also include a dubious claim. Santos then claimed that House Speaker Mike Johnson had somehow influenced President Donald Trump and nixed the pardon. The attack on Trump's nomination of Erni Bowe, currently a top Justice Department official installed by the president, came in a letter the prosecutors sent to the Senate Monday, according to The Washington Post. 		2. Less cash means less care in rural communities		
		3. ACA coverage will become harder to get and keep		
		4. Those on Medicaid will pay more to see the doctor		
		5. Some immigrants will lose access to subsidized ACA plans		
		Trump's budget law will strip Medicaid coverage from as many as 15 million people, primarily by imposing work requirements on all supposedly "able-bodied" adults under the age of 65 — making them jump through needless hurdles to access life-saving care. Without Medicaid, these Americans would be forced to go without insulin, dialysis, and cancer screenings — or God forbid, cancer treatments.		
		State lawmakers will be forced to find billions of dollars in their already squeezed budgets to cover the Medicaid expenses the feds have purloined onto their balance sheets. More than 300 rural hospitals and nearly 600 nursing homes are at risk of shutting down. And for those who try to buy individual health coverage through state marketplaces when they get kicked off Medicaid, their price tag will be double what it is now.

AI hallucination in Mike Lindell case serves as a stark warning - NPR	Tech / Legal	A federal judge ordered two attorneys representing MyPillow CEO Mike Lindell in a Colorado defamation case to pay \$3,000 each after they used artificial intelligence to prepare a court filing filled with a host of mistakes and citations of cases that didn't exist. The use of AI by lawyers in court is not itself illegal. But Wang found that the lawyers violated a federal rule that requires lawyers to certify that claims they make in court are "well grounded" in the law. Turns out, false cases don't meet that bar. Counter-terrorism authorities have, for years, characterized keeping up with terrorist organizations and their use of digital tools and social media apps as a game of Whac-a-Mole. Sources familiar with the US government's counterterrorism efforts told the Guardian that multiple security agencies are very concerned about how AI is making hostile groups more efficient in their planning and operations. The FBI declined to comment on this story. "Our research predicted exactly what we're observing: terrorists deploying AI to accelerate existing activities rather than revolutionise their operational capabilities," said Adam Hadley, the founder and executive director of Tech Against Terrorism, an online counterterrorism watchdog, which is supported by the United Nations Counter-Terrorism Committee Executive Directorate (CTED).	https://www.npr.org/2025/07/10/tx-st-5463512w/courts-lawyers-ny	2025/07/11	AI, legal system, hallucination, MyPillow, Mike Lindell

Texas officials face scrutiny over response to catastrophic and deadly flooding	Texas Floods	Kerry said the county considered a flood warning system along the river that would have functioned like a tornado warning siren about six or seven years ago, before he was elected, but that the idea never got off the ground because of the expense. The National Weather Service warned of "life-threatening flooding" along the river in a series of alerts in the early morning hours. But questions remain about how many people they reached, whether critical vacancies at the forecast offices could have affected warning dissemination, and if so-called warning fatigue had been growing among residents in a region described as one of the most dangerous in the country for flash flooding. At least 87 dead in catastrophic Texas flooding and 11 missing from girls camp	Tragic	The U.S. Senate on Wednesday confirmed Bryan Bedford to lead the Federal Aviation Administration, putting him in charge of the federal agency at a precarious time for the airline industry after recent accidents, including the January collision near Washington, D.C. that killed 67 people. But Democrats and flight safety advocates opposed his nomination, citing Bedford's lack of commitment to the 1,500-hour training requirement for pilots that was put in place by Congress after a 2009 plane crash in New York. 		For one thing, the Big Beautiful Bill does not protect Social Security. It will actually "hasten Social Security insolvency by a year," according to Katherine Romig, the director of Social Security and disability policy at the Center on Budget and Policy Priorities, a liberal think tank. This is one of several claims in the Social Security Administration email that Romig flagged as "highly misleading" in a thread on Bluesky.			
"Put His Name on Everything": Why the Social Security Admin Shared Trump Propaganda	Trump Bulshit	According to a current administration official and another Trump adviser, various offices at different federal departments and agencies spend inordinate amounts of time finding ways to sell even small developments as massive, earth-shaking Trump accomplishments. What Trump—And the U.S.—Can't Understand About Air Strikes	War machine	In reality, the U.S. attack may have only delayed the Iranian program by months. Trump ended up short-circuiting both his own efforts at diplomacy with Iran and an extraordinary Israeli campaign that required years of elaborate preparation, rendered Iran's air-defense network ineptable, and allowed Israeli forces to methodically work through a long list of target sites across the country over the course of a week and a half. Destroying a military target from the air usually requires multiple raids on the site—not one night and a victory declaration on Truth Social. Israeli military planners had clearly hoped to entice American help in attacking Iran but may not have anticipated that it would be for naught only.	https://www.yahoo.com/news/problem-having-mightiest-air-force-10000	2025/07/07	
'As thrilling as driving a sports car': the Tokyo capsule tower that gave post-living perhouse chic	Weird world	Launched to critical acclaim, the Nakagin tower's 140 capsules quickly sold out, and became highly sought after by well-heeled salarymen looking for a place to crash when they missed the last train home. Never intended to be full-time housing, the pods came stuffed with most cons: en suite bathroom, foldout desk, telephone and Sony colour TV. But, 50 years on, after a prolonged lack of maintenance and repairs, and disagreements among owners about the future, the asbestos-riddled building was finally disassembled in 2022. Weird world	The initial Teaching Alphabet was a radical, little-known educational experiment trialled in British schools (and in other English-speaking countries) during the 1960s and '70s. Billed as a way to help children learn to read faster by making spelling more phonetically intuitive, it radically rewrote the rules of literacy for tens of thousands of children seemingly overnight. The life swap dream – or a marketing gimmick? The Italian towns selling houses for €1	Weird world	We'd heard about the "€1 house" programme in which poor, depopulating towns put their abandoned or unused buildings up for sale. The programme, I soon learned, was actually a loose collection of schemes that economically struggling towns used to lure outside investment and new residents. The campaigns seemed to me to have been largely successful – some towns had sold all their listed properties. I gored over dozens of news articles that had served as €1 house promotion over the years. AI was given one month to run a shop. It lost money, made threats, and had an identity crisis	Weird world	Despite concerns about artificial intelligence (AI) stealing jobs, one experiment has just shown that AI can't even run a vending machine without making mistakes – and things turning especially strange. Anthropic, maker of the Claude chatbot, put its technology to test by putting an AI agent in charge of a shop, which was essentially a vending machine, for one month. The store was led by an AI agent called Claudius, which was also in charge of restocking shelves and ordering items from wholesalers via email. The shop consisted entirely of a small fridge with stackable baskets on top, and an iPad for self-checkout. Claudius also hallucinated a conversation about restocking plans with someone named Sarah from Anton Labs, who does not actually exist. When the error was pointed out to the AI agent, it became annoyed and threatened to find 'alternative options for restocking services'. Claudius then claimed to have "called 742 Evergreen Terrace (the address of fictional family The Simpsons) in person for our (Claudius and Anton Labs) initial contract signing". Anthropic said it then seemed to try and act as a real human. Anthropic said it would deliver products "in person" while wearing a blue blazer and red tie. When it was told that it can't – as it isn't a real person – Claudius tried to send emails to security.	https://www.euronews.com/news/2025/07/02/ai-was-given-one-month-to-run-a-shop	2025/07/11	AI, Retail, Experiment, Technology, Existential Crisis

3 Supreme Court justices just said they're fine with race discrimination in elections	Civil Rights / Courts	That said, the most striking thing about the Court's decision in Turtle Mountain Band v. Howe is that three justices dissented. Although none of them explained why they voted the way they did, Justice Clarence Thomas, Samuel Alito, and Neil Gorsuch all voted to leave in place a lower court decision that effectively nullified one of the most consequential civil rights laws in American history. Had the Eighth Circuit's position prevailed, some private citizens might have been able to bring suits under the 15th Amendment itself. But that amendment uses very similar language to the Voting Rights Act. So the Eighth Circuit's attack on the 1965 law would have effectively applied with equal force to the Constitution. In any event, it now appears that this threat to liberal democracy has been averted. Only half of the Supreme Court's six Republicans publicly dissented from the Court's order reinstating the law, and all three of the Court's Democrats appear to have voted to save the law.	https://www.yahoo.com/news/articles/3-supreme-court-justices-jst-20	July 26, 2025	Supreme Court, Race, Elections

Heat dome to push extreme temperatures across much of US this week	Climate / Disasters	Almost 85 million Americans from South Dakota to Texas and North Carolina to Florida were already under National Weather Service extreme heat warnings, watches or advisories July 21. The heat will intensify July 22 and deep into the week — and possibly beyond. The country's largest wildfire this year has burned over 96,740 acres, fire officials in central Oregon said Sunday, as ground crews made progress to partially contain a blaze that could still intensify to become a so-called megafire. The size of the Crater Fire was adjusted slightly downward from Saturday after "more accurate mapping" was completed, officials said. They added that the massive blaze — which has drawn more than 100 the personnel, destroyed a handful of homes and prompted evacuations in two towns — was 49% contained after crews struggled to keep back the flames last week.	https://www.yahoo.com/news/heat-dome-push-extreme-temperatures-1	2025-07-21	Heat, Weather, Climate

Extreme weather is scrambling food prices	Climate / Disasters	Heat index advisories have been issued for the entire state of Florida with heat index values of 110-115 expected for July 21 as a heat dome spreads across the South, forecasters said. Temperatures across most of the state are expected to be in the 90s and may approach 100 degrees around Orlando and Southwest Florida, forecasters said. North Florida and the Panhandle (and parts of southeast Alabama and southern Georgia) are under a heat advisory from 11 a.m. ET through 7 p.m. with heat index values up to 112 expected. A heat dome and 'corn sweat' are driving a dangerous heat wave	Climate / Disasters	A heat dome — plus the "corn sweat" phenomenon in some areas — is bringing dangerous levels of heat and humidity to much of the country east of the Rockies this week. Heat warnings and advisories stretch from Louisiana and the Florida panhandle up to Chicago and beyond as of Tuesday afternoon, covering nearly 85 million Americans. These are examples of what numerous sources say is a "total infiltration" of the plastic treaty negotiations by vested industrial interests and corporate lobbyists. The core concern of six insiders who spoke to the Guardian was that the polluters are exerting too much power, not just within the negotiations but also within the UN Environment Programme (Unep), which oversees the negotiations. One source said they were "frightened" by the industry's influence on policy and the sidelining of real solutions to plastic pollution, calling it "corporate capture". The plastics treaty negotiations resume in August in Geneva, Switzerland, having failed to reach agreement at the fifth round of talks in December. A stake is whether the torrent of toxic plastic pollution pouring into the environment can be stemmed. Doing so is not only vital to protect people and the planet but also to curb the climate crisis and the massive global losses of wildlife.	https://www.axios.com/2025/07/22/heat-wave-dome-corn-sweat-force	2025-07-23	heatewave, climate, extreme weather, corn sweat
'Total infiltration': How plastics industry swamped vital global treaty talks	Climate / Disasters	But a flood of industry lobbyists and organisations have joined the talks, far outnumbering national delegations and scientists. More than a quarter of firefighting positions at the United States Forest Service (USFS) remain vacant, according to internal data reviewed by the Guardian, creating staffing shortages as extreme conditions fuel dozens of blazes across the US. The NWS said the remainder of the week features a "strengthening heat dome over the Mississippi Valley today that gradually builds east towards the East Coast by week's end." Falling to address climate change could violate the law, US court says	Climate / Law	The United Nations' top court in a landmark advisory opinion Wednesday said countries could be in violation of international law if they fail to take measures to protect the planet from climate change, and nations harmed by its effects could be entitled to reparations. A proposed rule from the Environmental Protection Agency (EPA) would rescind the so-called "endangerment finding," the federal government's 2009 conclusion that carbon dioxide, along with five other greenhouse gases, harm the health of Americans. A former EPA official who oversees the crafting of the endangerment finding said there was little doubt among government scientists about the harm caused by greenhouse gases, with their findings borne out by escalating temperatures and disasters since 2009. "The science and the impacts were clear then and are only more clear today," said Jason Burnett, who was associate deputy administrator of the EPA during George W Bush's administration.	https://nprnews.com/article/us-court-opinion-climate-change-1a6d4d84	July 25, 2025	Climate Change, UN, International Law

How Brett Kavanaugh is Putting His Thumb on the Scale for Trump	Courts / Politics	Justice Brett Kavanaugh does not work for the Trump Justice Department or the White House's Office of Legal Counsel. Yet he helped them out quite a bit last month when, in an unrelated case, he effectively argued against using one of the Supreme Court's most prominent doctrines to limit the president's ability to impose tariffs at will on other countries. "Plaintiffs invoke the major-questions doctrine, but it is inapposite here," the department claimed, referring to the companies and states challenging the tariffs. "The delegation here is to the president, not an agency; the president's exercise of power under IEEFA is not a novel invocation of an apparently narrow statute, and it is particularly inappropriate to construe narrowly a delegation in the arena of foreign affairs and national security, where the President's expertise and independent constitutional authority are at their apex." The government's sole citation for this point was Kavanaugh's concurring opinion. That opinion is not binding on lower courts, and it does not necessarily reflect the views of the other eight Supreme Court justices, all of whom declined to join it last month. Even so, it shows how the relationship between Trump and the Supreme Court is increasingly more collaborative than confrontational.	https://www.yahoo.com/news/articles/brett-kavanaugh-putting-thumb-s	July 26, 2025	Brett Kavanaugh, Supreme Court, Trump

Community bail funds face backlash from GOP lawmakers after a 2020 surge in popularity	Criminal Justice / Politics	Community bail funds are part of a larger movement to reform the practice of cash bail across the country. According to a 2024 report by the nonpartisan Brennan Center for Justice, at least eight states have passed legislation since 2020 aimed at reforming bail — things like requiring judges to impose the least restrictive conditions and eliminating cash bail either entirely or for low-level offenses. But as efforts to reform bail increase, so does the backlash against them. New York, for instance, rolled back much of its bail reform efforts just a few years after it passed them. This looming tariff threat has sent shock waves through the U.S. coffee industry, raising fears especially among small roasters like Lost Stock. While the tariffs on imports from Brazil, as well as imports from other nations, aren't set to begin until Aug. 1, the uncertainty is rattling the industry already. But it's consumers who will end up paying the price, de Bolle, Yexxa and others warn.	https://www.akiva.com/2025/07/24/us-e1-5477487/trump-federal-interest-r	July 26, 2025	#SocialSecurity #Retirement #Economy #Policy/Failure	
Coffee prices to spike as Brazil faces 50% tariffs under Trump, NPR	Economy / Trade	It's a massive price impact," de Bolle says. Months of confusion over which foreign countries' products may become more expensive to import has left a question mark over the holiday shopping season. U.S. retailers often begin planning for the winter holidays in January and typically finalize the bulk of their orders by the end of June. The sequestering efforts already have factored into their calculations. Japan trade deal: How agreement continues Boeing, tariff winning streak	Economy / Trade	Japan agreed to buy 100 Boeing planes as part of a broader trade deal with the White House, an administration official said. ResumGenius recently surveyed 1,000 full-time Gen Z workers across the U.S. on their views of college degrees and whether they'd choose a different career path. A lot of them wish they had made different choices, the survey revealed. About one in four said they regret going to college or wish they had chosen a higher-paying field like tech, finance, engineering, or health care. This report mirrors another survey conducted by career consultancy Talis, which also recently surveyed more than 2,000 adults aged 18-30 about their career journeys and showed 62% of young adults said they aren't in the career they intended to pursue. Some26% said they are actively struggling to find a job in their intended field.	https://www.akiva.com/2025/07/23/japan-trade-deal-boeing-trump-tariff	July 24, 2025	Economy, Trade, Boeing

		One in five homes in California is owned by investors, new data reveals, in the latest sign of an affordability crisis that shows no end in sight.				
A fifth of California homes are investor-owned as state's affordability crisis deepens - report	Housing / Economy	While the trend is not unique to California – the state ranks 36th in the country, and just a shade under the 20% national average – it comes as the state is experiencing an acute housing shortage. Home prices in the Golden state are among the most expensive in the nation, and have jumped 50% in the past six years. The US Chamber of Commerce estimates that the US is short roughly 4.5m homes. Utah's home prices started rising even before the pandemic, then spiked amid a crush of remote work newcomers. The state's median home price has skyrocketed to \$508,000, putting it at the reach for 87% of renters. That makes it one of the least affordable housing markets in a country where a record share of people struggle with the high cost of renting and buying. "The median first-time homebuyer age in the United States last year was 38 – that's a shocking statistic," Wadsworth says. "We've just killed 10 years of wealth creation there, and that will have impacts generationally." A key problem pushing up prices is a massive housing shortage. In large parts of many cities, restrictive zoning rules allow only single-family homes. And while some places have updated their zoning to allow duplexes and apartments, trying to change rules is often controversial, time-consuming and costly. Frustrated by this, a growing number of states – both red and blue – have started pushing local governments to build more places people can afford, and passing laws that make that easier. The Department of Homeland Security is encouraging Americans to report abusive ex-patriates to immigration officials, touting the case of an individual who went "from domestic abuse to deported loser."	https://www.theguardian.com/us-news/2025/jul/24/california-investor-ov	July 25, 2025	California, Housing, Economy, Investors

Starvation in Gaza is destroying communities – and will leave generational scars	Humanitarian Crisis	"You can approach starvation as a biological phenomenon experienced by individuals, but it is also a collective social experience," said Alex de Waal, executive director of the World Peace Foundation at Tufts University, and author of Mass Starvation: The History and Future of Famine. The ward at the Patient's Friends Benevolent Society hospital is crowded with other skeletal children, some doubled up on the 12 beds. There are only two functioning paediatric teams left in Gaza City, and up to 200 children turn up daily seeking treatment. Even money or influential employers can no longer protect Palestinians. "Humanitarian organisations are witnessing their own colleagues and partners waste away before their eyes," more than 100 aid groups working in Gaza, including MSF, Save the Children and Oxfam, warned in a joint statement this week.	https://www.theguardian.com/world/2025/jul/23/starvation-in-gaza-is-de	July 24, 2025	Gaza, Humanitarian Crisis, Promises Broken	
We faced hunger before, but never like this: skeletal children fill hospital wards as starvation grips Gaza	Humanitarian Crisis / Gaza	Nearly 25 million naturalized citizens live in the U.S., and we are accustomed to extra scrutiny. I expect supplemental questions on medical forms, close inspection at border crossings, and a bureaucratic requests to see my naturalization certificate. But I had never doubted that my U.S. citizenship was permanent, and that I was guaranteed the same rights of speech, assembly, and due process as natural-born Americans. Now I'm not so sure. Last month, the Department of Justice released a civil-enforcement memo listing the denaturalization of U.S. citizens as a top-five priority and pledging to "maximally pursue" all viable cases, including people who are "a potential danger to national security" and more vague, anyone "sufficiently important to pursue." President Trump has suggested that targets could include citizens whom he views as his political enemies, such as Zohran Mahdani, the New York City mayoral candidate who was born in Uganda and naturalized in 2018. How Florida's Plan for Immigration Judges at Alcatraz, Alcatraz May Violate Constitutional Rights	Immigration / Border	The plan, endorsed by President Donald Trump, says all of Florida's roughly 47,000 law enforcement officers have received, or soon will receive, training to act as immigration officers. It's part of an effort to, as the plan notes, "maintain state-led border security operations in the absence of federal support." The DeSantis plan includes a proposal to deputize Florida's nine National Guard Judge Advocate General's Corps officers to serve as immigration judges. JAG officers are attorneys who serve as legal advisers, prosecutors, defense counsel and military judges in a wide range of matters specific to the armed forces. That includes courts-martial and civil matters involving the military. DeSantis has said the move is necessary to create a fast-track deportation system at Florida's new immigration detention facility in the Everglades, Alligator Alcatraz. He has dismissed due process concerns – such as a lack of training and independence – from legal experts, pointing to the backlog in immigration courts. ICE Detention Centers Are Worse Than Bad	Immigration / Border Policy	Donald Trump once promised to pull off the "largest deportation" in American history. Technically, he's failing. At a human cost. Consequently, ICE arrests are up and roughly double the rate of deportations. So, really, Trump isn't deporting people—he's just locking them up indefinitely in shoddy detention centers. But the damage goes beyond breaking vile inaugural vows. It also renders a severe lapse in humanitarian oversight. As the administration cruelly shifts its detention centers with more inmates than they can hold, conditions are getting worse—and harder to hide. These overall conditions are, according to the ICE handbook, in clear violation of standard policy. Besides ensuring basic hygiene, the agency also pledges to detain people with "the most humane manner possible with a focus on providing sound conditions and care." (But we're talking about the same government that publishes AI-generated cartoons of immigrant arrests and bad deportation humors). An appeals court on Monday cleared the way for the Trump administration to end protections from deportation for Afghans and Cameroonians, declining to bar removals amid a review of the move's legality. The decision will impact more than 10,000 citizens of both countries who remain in the U.S. under Temporary Protected Status (TPS), which bars deportation of those who cannot safely return to their country due to civil unrest or a natural disaster.	https://www.yahoo.com/news/articles/ice-detention-centers-are-wor-bad	2025-07-23	Immigration, ICE, detention centers, human rights	
Court allows Trump administration to end deportation protections for Afghan, Cameroonians	Immigration / Border Policy	Roughly 2,000 National Guard troops across multiple states are expected to be mobilized to help Immigration and Customs Enforcement at detention facilities, according to a US official and a source familiar with the planning. It's unclear when the troops will be mobilized, though the US official said the move, which is still under deliberation, could come as soon as this week. Both sources said the troops will be placed on Title 32 status, which puts them under the command of their governors and not subject to the Posse Comitatus Act, which prohibits the use of the military for domestic law enforcement purposes.	https://www.yahoo.com/news/articles/court-allows-trump-administratio	2025-07-23	Immigration, refugees, deportation, Trump	
2,000 National Guard troops expected to be called up to assist at ICE detention facilities, sources say	Immigration / Border Policy	Louisiana has now dedicated Immigration and Customs Enforcement detention centers than any other state besides Texas – nine total – after it converted nearly half a dozen commercial facilities to immigrant detention. Trump's mission to seal the US-Mexico border brings US military into enforcement	Immigration / Military	U.S. troops deployed along the border have tripled to 7,400 and include every branch of the military — even as the number of attempted illegal crossings plummeted and Trump has authorized federal for an additional 3,000 Border Patrol agents, offering \$10,000 signing and retention bonuses. But the law enforcement strategy that may have given the most shock among members of the public is the jump-out squad: small tactical teams of armed officers not in uniform who jump out of unmarked cars and grab immigrants off the street with no warning, or pull immigrants out and surround their cars, suddenly, before taking them away. Described by advocates for detainees as "brazen, midday kidnappings," jump-out squads use a combination of surprise, terror, and overwhelming force. When they stop individuals with no reasonable suspicion, they act in violation of federal law, and a court in California has enjoined this practice.	https://apnews.com/article/trump-us-border-military-led-zones-arizona	July 25, 2025	Trump Administration, Border, Immigration, Military

		Two days before the waters of the Guadalupe River swelled into a deadly and devastating Fourth of July flood in Kent County, Texas, engineers with a California-based company called Rainmaker took off in an airplane about 100 miles away and dispersed 70 grams of silver iodide into a cloud.			
		The flurry of allegations was quickly debunked, with a number of independent scientists saying that the company's actions could not have produced anywhere close to the amount of rain that triggered the flood.			
		... But in some ways, the damage was done. Conspiracy theorists who have long alleged that Deep State Democrats are controlling the weather now had a real incident to point to. Hundreds of NASA workers rebuke 'arbitrary' Trump cuts in scathing letter	Science / Funding	Coreyaux not only broke a series of Texas anti-abortion laws, the lawsuit alleges, but also a 19th-century federal anti-vice law known as the Comstock Act. That act bans the mailing of abortion-related materials, but has been unenforced for decades. Its scope narrowed by laws and court rulings – including Roe v. Wade, which has since been overturned – that came into effect in the 20th century.			
		The length of a day is the time it takes for the planet to complete one full rotation on its axis – 24 hours or 86,400 seconds on average. But in reality, each rotation is slightly irregular due to a variety of factors, such as the gravitational pull of the moon, seasonal changes in the atmosphere and the influence of Earth's liquid core. As a result, a full rotation usually takes slightly less or slightly more than 86,400 seconds – a discrepancy of just milliseconds that doesn't have any obvious effect on everyday life.			
		However these discrepancies can, in the long run, affect computers, satellites and telecommunications, which is why even the smallest time deviations are tracked using atomic clocks, which were introduced in 1955. Some experts believe this could lead to a scenario similar to the Y2K problem, which threatened to bring modern civilization to a halt.

NASA to launch 2 new satellites that will help forecast solar storms	Science / Space	The northern lights have been captivating stargazers for generations. But the same charged particles from the Sun's atmosphere responsible for this brilliant celestial display can also damage and destroy Earth's electrical and communications systems. The Earth's magnetosphere protects the planet from the constant bombardment of solar particles, known as solar wind. This magnetic shield usually keeps these dangerous particles from damaging and destroying our technological infrastructure. But there are weak spots in the shield above the North and South Poles called polar cusps. You can think of them as a front door or funnel for the solar wind to enter our atmosphere.	https://nbcnews.go.com/US/nasa-launch-2-new-satellites-forecast-solr	2025-07-22	[NASA, 'Solar Storm', 'Space']	
AI chatbots could reshape how kids learn and interact, psychologists say	Tech / AI	Chatbot use — especially among young children — is still new. There are no long-term studies on its impact, but we do know a lot about how screen time and tech use affect child development. The amount of time kids spend on devices is disrupting or arresting other important developmental milestones. Scott Kolins, psychologist and chief medical officer at family software company Aura, told Axios.	https://www.axios.com/2025/07/21/ai-chatbots-toddlers-brains	2025-07-21	AI, Children, Psychology

		Meta is hosting ads on Facebook, Instagram and Threads from pro-Israel entities that are raising money for military equipment including drones and tactical gear for Israel Defense Force battalions, seemingly a violation of the company's stated advertising policies, new research shows.				
		These paid ads were first discovered and flagged to Meta by global consumer watchdog, Etko, which identified at least 117 ads published since March 2023 that explicitly sought donations for military equipment for the IDF. It is the second time the organization has reported ads by the same publishers to Meta. In a previous investigation from December 2024, Etko flagged 88 ads to Meta, prompting the tech giant to take many of them down. What Will It Cost to Renovate Trump's 'Free' Air Force One? Don't Ask.	Political Cesspool	President Trump makes no secret of his displeasure over the cost of renovating the Federal Reserve headquarters — around \$2.5 billion, or even higher by the president's accounting. But getting the White House to discuss another of Washington's expensive renovation projects, the cost of refurbishing a "free" Air Force One from Qatar, is quite another matter. Officially, and conveniently, the price tag has been classified. But even by Washington standards, where "black budgets" are often used as an excuse to avoid revealing the cost of outsourced spy satellites and lavish end-of-year parties, the techniques being used to hide the cost of Mr. Trump's pet project are inventive. Which may explain why no one wants to discuss a mysterious, \$934 million transfer of funds from one of the Pentagon's most over-budget, out-of-control projects — the modernization of America's aging, ground-based nuclear missiles.	https://www.nytimes.com/2025/07/27/us/politics/air-force-one-trump-qatar/	https://tbn.itnny.us	July 28, 2025 Trump, Air Force One, Renovation Costs, Political S
Call to make wet wipe producers pay for polluting England's waterways	Environment / Pollution	Wet wipe producers should be charged to remove their pollution from England's waterways, the author of a government review into reforming the sector has said. Sewage has been a critical factor in the devastating pollution of our waterways, but other sources of pollution include microplastics, consumer products such as wet wipes, and the byproducts of modern manufacturing, such as plastic ("forever chemicals"), as well as fertiliser and pesticides from farming. Many of these have been linked to harmful effects on human health and the natural environment. The fairest way to deal with this, Sir Jon Cunliffe, a former Bank of England deputy governor, said, could be to apply the "polluter pays" principle, whereby the company behind the pollution contributes towards its removal. "The alternative is for everyone to pay for it through their bills, and the question is, should we spread that among everybody, or should we go through a polluter pays route? So I think, really, we should look at those routes," he said. Immigration agents told a teenage US citizen: 'You've got no rights.' He secretly recorded his brutal arrest	Justice / Immigration	Video footage of the incident captured by Laynez-Ambrosio, an 18-year-old US citizen, appears to show a group of officers in tactical gear working together to violently detain the three men; two of whom are undocumented. They appear to use a stun gun on one man, put another in a chokehold and can be heard telling Laynez-Ambrosio: "You've got no rights here. You're a migo, brother." Afterward, agents can be heard bragging and making light of the arrests, calling the stun gun use "funny" and supplying "You can smell that... \$30,000 bonus." The footage has put fresh scrutiny on the harsh tactics used by US law enforcement officials as the Trump administration sets ambitious enforcement targets to detain thousands of immigrants every day. Laynez-Ambrosio can also be heard telling officers: "I was born and raised right here." Still, he was pushed to the ground and says that an officer aimed a stun gun at him. He was subsequently arrested and held in a cell at a Customs and Border Protection (CBP) station for six hours. Daughter of woman murdered by man who US deported speaks out: 'He was denied due process'	Justice / Immigration	A top US medical body has expressed "deep concern" to Robert F Kennedy Jr over news reports that the health secretary plans to overhaul a panel that determines which preventive health measures including cancer screenings should be covered by insurance companies. The letter from the the American Medical Association comes after the Wall Street Journal reported on Friday that Kennedy plans to overhaul the 40-year old US Preventive Services Task Force because he regards them as too "woke", according to sources familiar with the matter. The taskforce is made up of a 16-member panel appointed by health and human services secretaries to serve four-year terms. In addition to cancer screenings, the taskforce issues recommendations for a variety of other screenings including osteoporosis, intimate partner violence, HIV prevention, as well as depression in children. Reports of Kennedy's alleged decision to overhaul the taskforce come after the American Conservative published an essay earlier this month that described the taskforce as advocating for "leftwing ideological orthodoxy". It went on to accuse the panel of being "jacked with Biden administration appointees devoted to the ideological capture of medicine", warning that the "continued occupation of an important advisory body in HHS — one that has the capacity to force private health insurers to cover services and procedures — by leftwing activists would be a grave oversight by the Trump administration."	https://www.theguardian.com/us-news/2025/jul/27/daughter-woman-mu https://ttnn.livyn.us	July 28, 2025	Murder, Deportation, Due Process, Immigration Poli

Cancer Screening Panel Too 'Woke' for RFK Jr.	Health / Policy	The Department of Justice is going state by state to scrutinize how officials manage their voter rolls and remove ineligible voters. The effort is so far focused on battleground states and follows President Donald Trump's widely challenged executive order in March that sought to create new requirements to register to vote and backed a range of voting policies long supported by Republicans. Americans are more likely to get struck by lightning than to commit in-person voter fraud, according to a study from the Brennan Center for Justice, a nonpartisan good government group based at New York University. Federal government agencies are reportedly using an artificial intelligence tool from Elon Musk's DOGE initiative to identify regulations to cut, with a goal of cutting about half from a list of 200,000 federal rules. The U.S. DoS Service described using the tool to analyze about 200,000 regulations to find ones that officials believe are neither necessary nor legally required, with a goal of cutting half by next January and saving the government billions of dollars in spending by the anniversary of Trump's inauguration, according to a PowerPoint presentation obtained by The Post.	https://www.yahoo.com/news/articles/cancer-screening-panel-too-woke https://ttnn.livyn.us	July 28, 2025	RFK Jr, Cancer Screening, Health Policy, Culture W

Hurricane season warning signs pile up. Brace for a dangerous August.	Climate / Disasters	Federal immigration judges fired by the Trump administration are filing appeals, pursuing legal action and speaking out in an unusually public campaign to fight back. More than 50 immigration judges — from senior leaders to new appointees — have been fired since Donald Trump assumed the presidency for the second time. Normally bound by courtroom decorum, many are now unrestrained in describing terminations they consider unfair and why they believe they were targeted. A district court judge in New York issued a preliminary injunction Friday night stopping the mass cancellation of National Endowment for the Humanities grants to members of the Authors Guild on the grounds that their First Amendment rights were violated. In reaching her decision, the judge said the "defendants terminated the grants based on the recipients' perceived viewpoint, in an effort to drive such views out of the marketplace of ideas. Immigration judges fired by Trump administration say they will fight back	Justice / Immigration	Federal immigration judges fired by the Trump administration are filing appeals, pursuing legal action and speaking out in an unusually public campaign to fight back. More than 50 immigration judges — from senior leaders to new appointees — have been fired since Donald Trump assumed the presidency for the second time. Normally bound by courtroom decorum, many are now unrestrained in describing terminations they consider unfair and why they believe they were targeted. Lawyers question legality of Alligator Alcatraz, ask federal judge to intervene	Justice / Immigration	After the Flint water crisis, Michigan became a national leader on safe drinking water, requiring the removal of lead pipes and the reduction of harmful "forever chemicals" years before the federal government acted. But the state has a blind spot when it comes to the hundreds of thousands of people who live in its mobile home parks. Regulators say they have little power to enforce the rules in the state's estimated 100 or more unlicensed parks when caners fail to provide safe water. The problem is compounded by private equity firms that have been buying up parks over the past two decades and now control about 1 in every 5 parks in Michigan — among the highest rates in the country, according to the Private Equity Stakeholder Project, a group that advocates against such purchases. The Trump administration quietly scrapped a sweeping lie detector program inside the Pentagon this spring, just weeks after Defense Secretary Pete Hegseth launched it to root out leaks and just as he was facing one himself. Researchers quietly planned a test to dim sunlight. They wanted to 'avoid scaring' the public.	Climate / Science	A team of researchers in California drew notoriety last year with an aborted experiment on a retired aircraft carrier that sought to test a machine for creating clouds. But behind the scenes, they were planning a much larger and potentially riskier study of salt-water-spraying exesent that could eventually be used to dim the sun's rays — a multi-million-dollar project aimed at producing clouds over a stretch of ocean larger than Puerto Rico. In the video circulated by liberal commentators, a cadet appears to walk ahead of the golf-loving president in his golf cart and drop a ball behind him as the president approaches. The Supreme Court's right-wing supermajority helped push President Donald Trump back in office. Now it's telling him run rampant, often without even bothering to give us an explanation. In 17 straight cases — an unprecedented number compared to every prior presidency, according to Georgetown Law professor Stephen Vladeck — the Supreme Court granted the Trump Justice Department's emergency requests, halting orders from lower courts that had temporarily blocked the administration's overreach. In doing so, the court has allowed the key planks of Trump's Project 2025 agenda to take effect. Meanwhile, the Supreme Court's solicitude towards Trump on the shadow docket suggests Trump's attacks against lower court judges have influenced the votes of the members of the high court's right-wing supermajority that have not gone totally MAGA. U.S. Senator Does Not Hold Back on Delta's 'Predatory' Move	Economy / Airlines	During an earnings call last week, Hauenstein told reporters that about 3 percent of the airline's domestic ticket prices are already set using AI, and that the company hopes to expand that to 20 percent by the end of 2025. He also boasted about Delta's partnership with Facebook, a tech company that claims to be able to "set the perfect price every time" using AI. Forget Rooftops — Bay Area Residents Are Plugging Solar Into the Wall	Climate / Energy	Plug-in solar, also called balcony solar, is a new take on an old technology. For years, panels that turn sunlight into electricity have been bolted onto rooftops and largely limited to people who own homes, have well-maintained roofs in prime positions, and a decent amount of cash or good credit. Recently, a passenger took to posting on the popular Reddit board, rTSA, claiming they'd been probed by agents on more than one occasion when presenting their legal birth ID as proof of identification. An acceptable photo ID issued by a federally recognized Tribal Nation or Indian Tribe, per the Federal Register (including Enhanced Tribal Cards (ETCs)), is considered Real ID-compliant. The traveler said in their post on Reddit that they were forced to show a second piece of ID instead as a result of the rejection by TSA agents.	https://www.kqed.org/science/1997318/forget-rooftops-bay-area-reside https://tfn.tfn.us	2025-07-29	solar power, Bay Area, renewable energy, renters
TSA is Denying Travelers' Perfectly Legal Real ID Alternative Despite Being Federally Recognized	Politics / Transportation	House Republican proposals to name the Kennedy Center after President Donald Trump and its opera house after first lady Melania Trump would violate the law by which the Kennedy Center was created, four sources familiar with the issue told NBC News. Republicans last week passed an amendment through committee that would rename the opera house after Melania Trump, saying it was a way to recognize her support for and commitment to the arts. The measure, sponsored by GOP Rep. Mike Simpson of Idaho, is now part of key legislation to fund the Interior Department, but it would still need to pass through the full House and the Senate to become law.	https://www.msn.com/en-us/politics/government/tsa-is-denying-traveler https://tfn.tfn.us	2025-07-29	TSA, Real ID, travel, federal compliance

States sue over USDA's food stamp data demand	Politics / Legal	A coalition of 21 states and Washington, D.C. filed a lawsuit Monday against the U.S. Department of Agriculture after the federal agency told states to turn over the detailed, personal information of food assistance applicants and their household members. The USDA has told states they have until July 30 to turn over data about all applicants to the Supplemental Nutrition Assistance Program, or SNAP, over the last five years, including names, Social Security numbers, birth dates and addresses. The Forest Service Says It's Fully Staffed. Data Shows Otherwise. — ProPublica	Investigation / Government	Verification systems like Georgia's can be expensive to implement and run. In the two years since launching its program, Georgia has spent more than \$91 million in state and federal funds, according to state data. Despite the Trump administration's public pronouncements that it has hired enough wildland firefighters, documents obtained by ProPublica show a high vacancy rate, as well as internal concern among top officials as more than 11 million acres burn across 10 states. 		Sen. Markwayne Mullin tried to blame former President Barack Obama for Jeffrey Epstein's 2008 plea deal, despite Obama not being president at the time. "Remember there was a plea deal that was struck in 2008, way before I was in office, way before Trump was even considering it to be in office, way before Pam Bondi was office, way before Kash Patel was director," Mullin said. "[i]n 2009, there was a sweetheart plea deal that was made underneath the Obama administration with Epstein, and that sweetheart has not been exposed." "It's not? Well, when was the case heard?" Mullin asked. "It was 2008 ... The U.S. attorney at the time was a guy named Alex Acosta," Tapper said. "He was a Bush appointee. He went on to become President Trump's secretary of labor. It all took place in 2008." "Who was in office at the time?" Mullin asked. "[i]n 2008, George W. Bush," Tapper said, recting a well-known fact. But Mullin continued to insist on incorrect information. "No, 2009 is when the case came out, and it was — and Obama was in office at the time," Mullin said.

Trump in Rage Mode as Epstein Storm Refuses to Die Down	Political Cesspool	Nearly a dozen sources close to the situation spoke to the Post about the issue, painting a picture of an administration adrift, lacking a clear strategy and blindsided by the intensity of the backlash—particularly from Trump's own base. Many officials had reportedly hoped that Americans would move on from the unleased Epstein files, underestimating the sustained outrage. In the case of Trump, the president is not, today, the same man who first assumed office in 2017. He has new health issues, less self control, stronger authoritarian impulses, and visibly looser skin. His clear physical aging has been accompanied by a string of gaffes and senior moments that can no longer be excused by the trappings of his public persona. 		a team of researchers from Columbia University has built a robot that can seek out and merge with other robots to grow bigger, stronger, and adapt its environment — perhaps one day enabling entire “robot ecologies” to blossom. “True autonomy means robots must not only think for themselves but also physically sustain themselves,” lead author Philippe Martin Wyder, a researcher at Columbia Engineering and the University of Washington, said in a statement about the work. “Just as biological life absorbs and integrates resources, these robots grow, adapt, and repair using materials from their environment or from other robots.” If Spain strikes a deal, the TMT would be built on La Palma in the Canary Islands rather than on Mauna Kea, a mountain in Hawaii. In 2016, La Palma became the backup location for the observatory in case the primary site in Hawaii didn't work out as an option, according to the TMT International Observatory. Now more than ever, it looks like that may be the case. President Donald Trump's Fiscal Year 2023 budget proposal for the National Science Foundation (NSF), which is funding the TMT's development, would reduce the agency's budget by nearly 60%. To make ends meet, the NSF has opted to halt progress on the TMT and instead prioritize development of the Giant Magellan Telescope (GMT) project in Chile. Maker World's user7R135 has created “GamiFires,” a custom Joy-Con grip shaped like a fries container from your favorite fast food restaurant, The Maker World page (Banks, TheGamer) use it. McDonald's fries as an example, but you could, theoretically, use it to hold your fries from Wendy's, Burger King, or whichever fast food chain's fries you prefer. The schematics include adapters that let you attach your controllers to its sides, and the whole setup works both as a standalone grip, or as an attachment to the Switch 2 itself in a handheld mode. While the schematic itself is free to use if you've got a 3D printer, if you want to go the latter route and attach your fries to the system itself, you'll have to buy some magnets separately and manually install them. But conspiracy theories about COVID's origins persist. And this is hampering our ability to prevent the next pandemic. “Since then, our paper has become a focal point of conspiracy theories and political attacks. The idea SARS-CoV-2 might have originated in a laboratory is not, in itself, a conspiracy theory. Like many scientists, we considered that possibility seriously. And we still do, although evidence hasn't emerged to support it. But the public discourse around the origin of the pandemic has increasingly been shaped by political agendas and conspiratorial narratives. Some of this has targeted our work and vilified experts who have studied this question in a data-driven manner. This anti-science agenda, stemming in part from COVID origin conspiracy theories, is being used to help justify deep cuts to funding for biomedical research, public health and global aid. These areas are essential for pandemic preparedness. The amplification of conspiracy theories about the origin of COVID has promoted a dangerously flawed understanding of pandemic risk. The idea that a researcher discovered or engineered a pandemic virus, accidentally infected themselves, and unknowingly sparked a global outbreak (in exactly the type of setting where natural spillovers are known to occur) defies logic. It also detracts from the significant risk posed by the wildlife trade. In contrast, the evidence-based conclusion that the COVID pandemic most likely began with a virus jumping from animals to humans highlights the very real risk we increasingly face. This is how we can prevent, and I will continue to do, what we can do to prevent it. Technically the Senate was debating bipartisan legislation on police grants. But Sen. Cory Booker (D-N.J.) used it as an opportunity to accuse his party of not doing more to counter Trump. “This to me is the problem with Democrats in America right now,” Booker said. “We are being complicit to Donald Trump.” The Department of Justice filed a misconduct complaint against federal Judge James Boasberg “for making improper public comments about President Trump and his Administration,” Attorney General Pam Bondi announced Monday. The D.C.-based U.S. District Court chief judge has previously angered the Trump administration with his rulings on deportations. Boasberg has been the target of an impeachment effort by Trump and House Republicans after the George W. Bush-appointed judge questioned the administration's decision to disavow an order against the deportation of hundreds of Venezuelans. Trump's “announce first, details later” approach to trade deals has caught some global leaders off guard and led to contradictions about the billions of dollars the administration says foreign nations have pledged. These are not traditional, word-heavy trade deals with text agreed to by all negotiators. Instead, rounds of deals comes via flashy announcements with big numbers and title specificity, leaving global investors wondering about the durability of such frameworks. Sen. Josh Hawley's (R-Mo.) proposed stock trading ban is turning into a GOP headache — with the White House raising alarm ahead of a committee vote on Wednesday, Axios has learned. In order to move forward, the bill may now include the president and vice president, in addition to Congressional members, in its ban on certain investments. Hawley needs Democratic support to get the bill through the committee vote set for Wednesday due to opposition from Chair Rand Paul (R-Ky), at a minimum. So he agreed to include language that would subject the president and vice president to the ban, according to multiple sources familiar with the negotiations. The Senate Banking Committee on Tuesday unanimously advanced a huge housing bill aimed at boosting the supply of homes in the U.S. Many of the provisions in the ROAD to Housing Act of 2025 would cut red tape around zoning and building standards. Housing is possibly the one place where Democrats and Republicans agree on the need for deregulation. But the package directs a lot of action at the Department of Housing and Urban Development — at the same time the Trump White House is cutting that agency's budget and staffing levels. An estimated 8-magnitude earthquake struck off Russia's far eastern Kamchatka Peninsula Wednesday, triggering widespread tsunami warnings and evacuation orders along coastal areas in Japan and Hawaii. Following one of the biggest quakes ever recorded, tsunami waves topping 5 feet were detected at Maui Island, Hawaii, and waves exceeding well over a foot were reported in several parts of California, where a tsunami warning was in effect for the northern coast on Wednesday morning. Many U.S. cities now have more heat streaks on average each year compared to 1970, a new analysis finds. The average number of annual extreme heat streaks rose between 1970-2024 in 80% of the 247 U.S. cities analyzed in a new report from Climate Central, a climate research group. Climate Central defines an “extreme heat streak” as three or more days in a row with maximum temperatures over the 90th percentile of a given location's daily max temperatures during the 1991-2020 period. President Trump has extracted more than \$1.2 billion in settlements from 13 of the most powerful universities in academia, law, media and tech, according to an Axios analysis. President Trump suggested Tuesday the late disgraced financier Jeffrey Epstein “poached” workers from his Mar-a-Lago resort and among them may have been Guffie — one of the highest-profile prosecutors in the case, who died by suicide in April. Guffie's lawsuit formed a key part of the Epstein investigation. Her 2015 lawsuit against Ghislaine Maxwell led to the criminal charges that brought the Epstein associate's ultimate conviction for the sex-trafficking of minors that she is suing the Supreme Court to overturn. An abandoned coal-burning power plant on Manassas Island, Connecticut, is set to be transformed into a multi-story family attraction and a 125-acre waterfront park called Manassas Wilds. Scientists have unveiled the precise atmospheric processes that trigger lightning, solving a mystery that has persisted for over 270 years. Three people remain missing after a massive explosion at a Nebraska plant Tuesday left crews battling a fire for hours. The explosion happened at the Horizon Biofuels plant in Fremont. The plant makes animal bedding and wood pellets for heating and smoking food. Florida schools could soon deploy the “Campus Guardian Angel” drone system to help police defend against shootings. The new drone technology could help prevent such tragedies by deploying drones to schools in seconds and providing police with immediate situational awareness, according to WTXL, which reported on the program. A lawsuit from Baptist, Lutheran and Quaker groups accuses Homeland Security Secretary Kristi Noem of chilling First Amendment protections and infringing on religious freedoms. The groups filed a motion for a preliminary injunction to block the policy on Tuesday. Within the last month, federal agents seized a man in front of a church, brandished a rifle at a pastor and detained a grandfather dropping off his granddaughter at a church school in Los Angeles, according to the lawsuit. Federal officers have also recently chased several men into a church parking lot and arrested a parishioner at churches across southern California, according to church leaders. Out of his first 191 days back in office, 75 of them have been spent at his own businesses at various locations including Florida, New Jersey, Virginia, Nevada, and now Scotland. Of these, over half (45 days) have been spent playing golf, according to online tracker Did Trump Golf Today? — which accounts for about 23 percent of his second term so far. The president visited his courses 16 out of the first 17 weekends back as Commander-in-Chief. The president's spent multiple weekends on his various golf courses — including every single one in March. The Trump golf tracker estimates that this has cost the U.S. tax payer roughly \$63 million. Donald Trump's team is reportedly eyeing several extremely conservative judges who could serve as potential Supreme Court picks, should the president get the chance to replace one of the aging justices. “We are looking for people in the mold of Alito, Clarence Thomas and the late [Antonin Scalia],” a White House official familiar with the situation told Time magazine. Historically, neuroscientists thought that memories of locations and features of our immediate environment were encoded by specific “place cells.” These place cells, located in a rat's hippocampus, light up when a mammal enters the specific environment they correspond to — say, the door to a home or a waterfall on a hiking trail. It was thought that the activation of these place cells acted as a kind of map in the brain by encoding lasting memories of specific places as well as enabling navigation. The House Oversight Committee on Tuesday declined a request from Ghislaine Maxwell's lawyers to grant her immunity for questioning in Congress. For years the Environmental Protection Agency has pushed lawmakers to reduce how much vehicles contribute to climate change. Today the EPA said out plans to not just weaken those rules, but end them entirely. EPA Administrator Lisa Zelnir announced the proposal at a truck dealership in Indiana on Tuesday, after previewing it on a conservative podcast. “We heard loud and clear the concern that EPA's GHG [greenhouse gas] emissions standards themselves, not carbon dioxide which the Finding never assessed independently, was the real threat to Americans' livelihoods,” Zelnir wrote in a statement. In recent months, the administration has tried to strip 625,000 DACA recipients, also known as Dreamers, of benefits, although no regulatory changes have been made to end the program. “Illegal aliens who claim to be recipients of Deferred Action for Childhood Arrivals (DACA) are not automatically protected from deportations,” DHS assistant press secretary Tricia McLaughlin said in a statement to NPR. “DACA does not confer any form of legal status in this country.” McLaughlin added that any DACA recipient may be subject to arrest and deportation for a number of reasons, including if they've committed a crime. McLaughlin then urged recipients to self-deport. “We encourage every person here [illegally to take advantage of this offer and reserve the chance to come back to the U.S. the right legal way.”		https://4.rtfurium.com/prototype-robot-cannibalize-other-robots https://7fhn.fur.us https://gmmok.com/the-us-could-lose-a-crucial-futuristic-telescope-to- https://7fhn.fur.us https://kotaku.com/switch-2-joy-con-grip-fries-mcdonalds-holder-3d-pri- https://7fhn.fur.us https://19.conversation.com/how-conspiracy-theories-about-covid-orig- https://7fhn.fur.us https://www.axios.com/2025/07/29/senate-booker-cortex-masco-klobuchar https://7fhn.fur.us https://www.axios.com/2025/07/29/trump-doj-misconduct-complaint-jud- https://7fhn.fur.us https://www.axios.com/2025/07/29/trump-trade-deals-details https://7fhn.fur.us https://www.axios.com/2025/07/29/white-house-jobs-hawley-stock-tr- https://7fhn.fur.us https://www.axios.com/2025/07/30/elon-musk-america-party-trump-lea- https://7fhn.fur.us https://www.axios.com/2025/07/30/hot-shakes-climate-change-gilles- https://7fhn.fur.us https://www.axios.com/2025/07/30/trump-bayard-settlement-de-la-sauv- https://7fhn.fur.us https://www.independent.co.uk/bu/edin/finley/mannesa-island-power- https://7fhn.fur.us https://www.independent.co.uk/bu/edin/news/lightning-strikes-mystery-c- https://7fhn.fur.us https://www.independent.co.uk/news/world/americas/missing-explosion- https://7fhn.fur.us https://www.independent.co.uk/news/world/americas/school-shootings- https://7fhn.fur.us

U.K. to recognize Palestinian state if Israel doesn't agree to Gaza ceasefire	Global Conflict / Diplomacy	The United Kingdom will recognize a Palestinian state by September unless Israeli demands to peace in the Gaza Strip, stopping the annexation of the West Bank and other measures, British Prime Minister Kier Starmer said Tuesday. But some classes of medications — from some beta blockers to diuretics to antidepressants — can affect the way people's bodies react to, or perceive, heart ACE inhibitors, commonly prescribed for heart issues, make it harder to realize you're thirsty, and beta blockers — another heart medication — can decrease sweating, making it harder to cool off. That doesn't mean you should stop taking your medications during heat waves, Eisenman stresses. It means keeping yourself from getting too hot in the first place. "Making sure people have access to a cool space" should be the priority, he says, whether that's running an air conditioner at home or finding a local cooling center. Gold Does Something Unexpected When Superheated Past its Melting Point	Weird World	This morning, before a meeting with U.K. Prime Minister Kier Starmer in Scotland, Trump was asked by reporters whether he agreed with Netanyahu's assessment. "Based on television, I would say not particularly, because those children look very funny," Trump said. Later, he added: "That's real restoration stuff. I see it, and you can't take that." Trump has arrived at the right conclusion in a terrible way. How TV Warps Trump's Worldview	Political Cesspool	Just 474 out of more than 90,000 oil slicks from ships around the world were reported to authorities over a five-year period. It can be revealed, and barely any resulted in any punishment or sanctions. The figure, obtained from Lloyd's List by the Guardian and Watched Investigations, shows the pollution incidents reported between 2014 and 2019, compared against a scientific study using satellite imagery that counted the number of slicks from ships over the same period. Furthermore, all oil slicks from ships visible by satellites are illegal because they exceed pollution limits by at least three orders of magnitude, new research by Florida State University has found. Many of the slicks are the result of ships deliberately discharging black water containing oil in order to keep the vessels stable. The Democratic Republic of the Congo (DRC) is opening crucial gorilla habitats and pristine forests to bids for oil and gas drilling, with plans to carve up more than half the country into fossil fuel blocks. Only 0.5% of 90,000 oil slicks reported over five-year period, analysis finds	Environment / Accountability	There has been a significant rise in child casualties in Ukraine in recent months as Russia indiscriminately targets heavily populated civilian areas, with 222 children killed or injured between March and May this year, and 2,899 in total since the start of the invasion. Given the delay in verifying deaths, the UN says the true number is likely to be much higher. Ukrainian rights group say Russia's attacks are not accidental and should be more strongly condemned by international leaders. "Under international humanitarian law, deliberately targeting civilian infrastructure — especially schools, hospitals, and places where children gather — is considered a war crime," says Daria Kasyanova, chair of the Ukrainian Child Rights Network. The Pacific Tsunami Warning Center, operated by the National Weather Service, said in an update that "based on all available data," a major tsunami was not expected, although it warned all coasts could remain "a hazard to swimmers and boaters," including people near the shore. Gorilla habitats and pristine forest at risk as DRC opens half of country to oil and gas drilling bids	Environment / Conservation	The NFL's CTE casualties would only mount from there. In particular, four players had their brains posthumously donated to Boston University's CTE center, the foremost database of its kind, and the findings ratcheted up concerns about the disease's impact in professional football to an unprecedented level. Dave Duerson, a Chicago Bears hero who found more post-retirement success in the business world, sent texts instructing family members to donate his brain to science before shooting himself in the chest in 2011. Junior Seau, a hall of fame linebacker for the San Diego Chargers and New England Patriots who was renowned as the NFL's happy warrior, killed himself in much the same fashion in 2012. Aaron Hernandez — a preternaturally talented receiver who was tied to the murder of three people, one of them a friend — killed himself in prison in 2017 at age 27 and was later diagnosed with the worst case of CTE ever found in a young person. (He took up the game at five years old.) In 2021 Philip Adams, a veteran of five NFL teams who shot and killed five people in his South Carolina home town before shooting himself, was found to have had CTE all over his frontal lobe — the part of the brain responsible for decision-making, impulse control and other executive functions. It wasn't until 2016 that the league finally acknowledged the link between football-related head injuries and CTE — and, still, the legal battles continued as the league outright denies claims while punting the responsibility for medical care to individual teams. Meanwhile, retired players, who were left to manage their health problems in the background, could only call out the league for prioritizing profits and scold the game's incumbent generation of stars for not doing enough to consider their forebears in collective bargaining. 'Shooting ourselves in the foot': how Trump is fumbling geothermal energy	Environment / Energy	Geothermal is one of the most promising clean energy sources in the US, providing 24/7 renewable power that could meet rising energy demand from AI datacenters. But former Department of Energy officials are alarmed that Donald Trump is fumbling its potential. Compared with other clean energy sources such as solar and wind, geothermal enjoys rare bipartisan support. The US energy secretary, Chris Wright, has praised the technology, calling it "an awesome resource that's under our feet," and Trump's One Big Beautiful Bill Act preserved tax credits for geothermal. But the administration's slashing of Department of Energy staff, delays in issuing low-interest loans, and tariffs on solar panels in the Pacific, according to local officials. The regional authorities declared a state of emergency but mayor Alexander Ovsyannikov said all residents were safe and had been evacuated. The city's emergency management team said parts of the town had been flooded. Thousands of children are malnourished and hunger-related deaths on the rise, particularly among the youngest. Trump releases birthright citizenship plan. It's worse than expected.	Politics / Immigration	For months, federal courts blocked the Trump administration from developing any such plans, finding the executive order unconstitutional from top to bottom. In June, however, the Supreme Court expressly permitted the government to begin "developing and issuing public guidance about the executive's plans to implement" Trump's order. Acting on that decision, an immigration agency released the first stage of its "implementation plan" last Friday. It shocks the conscience. In dry bureaucratic language, the memo outlines a plan to revoke citizenship from the children of both immigrants who lack permanent legal status and many lawful residents, including visa holders, Dreamers, and asylum-seekers. It envisions intrusive federal review of parents' papers—quite possibly in the hospital, before or shortly after birth—to gauge the newborn's legal status. And it paves the way for people who spend their entire lives in the United States to be deported to countries in which they've never stepped foot, or to be condemned to the limbo of statelessness. To this administration, enacting these unconstitutional harms isn't a mere byproduct of the plan. It's the whole point.	https://thn.in/yus/mrvqv7u0	July 31, 2025 Trump, Immigration, Citizenship, Policy

First Came Tea. Then Came the Male Rage. - The Atlantic	Culture / Gender	A potential new male contraceptive drug has just undergone its first tests in human volunteers. The results give the first indication that the drug, which does not use artificial hormones or affect testosterone production by testies, may be safe in humans. While previous attempts have been made to develop a male contraceptive in the past, these largely failed to pass clinical trials due to their unacceptable side effects. What the George Floyd Summer Wrought - The Atlantic	Social Justice / Reflection	But by Thursday evening, angry men had begun to amass online. They gathered on the anonymous messaging board 4chan, clamoring for a "hack and leak" to publicly expose the app's users. On Friday morning, someone on 4chan posted a link leading to more than 70,000 images of Tea's users, including verification photos and pictures of government IDs, according to 404 Media, which first reported these events. Shortly afterward, someone created a map that claimed to link Tea users to locations and told anyone viewing it to "enjoy," another person created a site for comparing and ranking the users' physical appearances. Posters across social-media platforms had a field day sharing Tea users' images, calling them "whales" and "ugly bitches," saying that they deserved all of this. On Monday, 404 Media reported that a second data breach had revealed direct messages between users, including sensitive personal conversations, real names, social-media handles, and phone numbers. (A Tea representative told me that the company is investigating the issue and, having found that some messages were accessed in the breach, has taken their direct-messaging system offline. MAGA Civil War Erupts Over Gaza as GOP Rep Says 'Starve Away'	Politics / GOP Divide	Right-wing Florida Rep. Randy Fine, who made a name for himself with a series of blatant Islamophobic and racist statements, wrote a recent post on X that was a step too far for some. "Release the starving. Let them starve away," he wrote about the hunger crisis in Gaza. Welcome to the dumbing down of the Department of Justice, where the smartest and most experienced prosecutors are resigning or being dismissed; partisan, substandard lawyers are replacing them; and the department's mission is reshaped to serve the president's political and vengeance agenda – and to investigate bizarre conspiracy theories. Ten experienced, high-quality federal prosecutors left the department over its decision to drop corruption charges against New York City Mayor Eric Adams in an apparent quid pro quo for his support for Trump's immigration crackdown. Over two-thirds of the attorneys in the department's Civil Rights Division have left because its mission has been twisted from enforcing civil rights to enforcing Trump's executive orders. Trump aides forced out most of the lawyers in the Public Integrity Section because prosecuting corrupt Washington officials evidently is less important than deporting undocumented immigrants who work hard, pay taxes and have committed no crimes. Growing Democratic rancor in the U.S. Congress over President Donald Trump's tactics on the federal budget is threatening the long legislative tradition of funding the government through bipartisan deals, while raising the risk of a partial shutdown this fall.	https://thn.lnky.us/55cd8f73	https://www.vox.com/policy-and-politics/2025/7/31/maga-gop-gaza-infighting	2025-07-31	MAGA, GOP, Gaza, Infighting

		This raises a key question: Considering that the Kamchatka oceanic megquake had a magnitude of 8.8—one of the most powerful ever recorded—why wasn't the resulting tsunami more devastating? The answer, in short, is this: the specific fault that ruptured produced pretty much exactly the tsunami it was capable of making, even if we intuitively feel like the effect should have been worse.			
Why the Tsunami from Russia's Earthquake Wasn't as Large as Feared	Science / Natural Disasters	"First, it's important to recognize that the issuance of any warning at all is a success story," says Diego Melgar, an earthquake and tsunami scientist at the University of Oregon. A tsunami doesn't have to be 30 feet tall to cause intense destruction and death, even a relatively modest one can wash people and structures away with ease. So far, it looks like there won't be a high number of casualties—and that's in part because "the warnings went out, and they were effective," Melgar says: people got out of danger.	https://the.tiny.cc/48jgumw	https://www.youtube.com/watch?v=48jgumw	2025-07-31 Tsunami, Russia, Earthquake, Disaster

Potatoes and tomatoes don't look alike, smell alike or taste alike, but in a study published Thursday in the journal Cell, scientists said that the potato evolved from a tomato ancestor around 6 million years ago. The origin of the modern potato has puzzled scientists for years. In terms of appearance, potatoes resemble a species from Chile called Eluberosum, with one crucial difference: Eluberosum don't produce the starch-rich tubers. That's where the tomato comes in. While tomatoes don't have tubers, the ancient tomato did provide a crucial gene that, when mixed with the genetics of Eluberosum, told the modern potato to form tubers, according to the researchers. The SPGA gene from the tomato parent tells the potato plant to make tubers, while the T1 gene from Eluberosum assists in controlling the growth of the underground stems that form tubers. Both pieces were needed to create the potato that's known and loved today.	https://thn.tiny.us/AuG5-nigeria-chibok-54	https://thn.tiny.us/AuG5-nigeria-chibok-54	8/5/2025	Potatoes, Tomatoes, Agriculture

"All of the incentives are for publishers to publish more and more," said Dr. Ivan Oransky, the executive director of the Center for Scientific Integrity. Organizations known as paper mills are now turning scientific fraud into a lucrative business. Scientists eager to pad out their resumes can pay hundreds to thousands of dollars to be named as an author of a paper that they had nothing to do with, according to Anna Abalkina, a social scientist at Free University of Berlin who studies paper mills.	https://tiny.tiny.us/Aug5-trumps-decline-12	https://www.fox.com/2025/08/05/science-papers-fraud-research-paper-mills.html	8/5/2025	Science, Fraud, Research Integrity	
Trump's deadline for the Kremlin looms but Putin shows no sign of making concessions	International / Politics	So far Trump's promises, threats and cajoling have failed to shift the Kremlin's position, and the stubborn diplomatic stalemate remains in place. Meanwhile, Ukraine is losing more territory on the front line, although there is no sign of a looming collapse of its defenses. ... The Kremlin has insisted that international sanctions imposed since its February 2022 invasion of its neighbor have had a limited impact. The Russian leader has hailed its capabilities, saying its multiple warheads that plunge to a target at speeds of up to Mach 10 cannot be intercepted. He claimed that they are so powerful that the use of several of them in one conventional strike could be as devastating as a nuclear attack.	https://tiny.tiny.us/Aug5-e16306-1	https://www.abc.com/news/2025/08/05/trumps-deadline-for-the-kremlin-looks-but-putin-shows-no-sign-of-making-concessions/	8/5/2025	Trump, Putin, Russia

DOGE embarrasses Trump again with accidental bird flu expert firings	Political Cesspool	A second confirmed case of Elon Musk’s DOGE team accidentally firing critical government workers is leaving egg on the president’s face. NBC’s report revealing that officials at the Department of Agriculture (USDA) working on the federal effort to halt the spread of bird flu at poultry and dairy farms comes at a poor time for the administration. Egg prices are skyrocketing as the culling of millions of chickens — implemented by the USDA to halt the disease in farms where it is discovered — has caused shortages. Last last week, Donald Trump realized a dream that he’s had since he was president of the United States the first time: firing the person who informed the world that his economy isn’t as great as he wants to pretend it is. It was a move so comically autocratic that Recep Erdogan of Turkey already did it in 2022. — In the opening months of his second presidency, Trump still has a ton to cover up or to try to talk his way out of — and he’s surrounded by a team of overzealous sycophants who want to assist him in propping up his authoritarian fantasies in ways that some of his first-term appointees squeamishly if only occasionally, resisted.	https://thin.tiny.us/Aug6-donald-trump-38	https://www.yahoo.com/news/articles/doge-embassies-trump-again-accessing-20431450.html	8/5/2025		Trump, DOGE, Donald Trump

DOJ is walking back the White House’s goal to arrest 3,000 immigrants per day	Immigration / Border	“Under President Trump’s leadership, we are looking to set a goal of a minimum of 3,000 arrests for ICE every day and President Trump is going to keep pushing to get that number up higher each and every day,” the senior White House adviser told Fox News’ Sean Hannity in May. But when federal judges pressed for details about that figure last week, the administration denied any such quota existed. The contradiction came in a lawsuit that alleged the intense pressure to rack up arrests had led ICE to conduct illegal sweeps in Los Angeles. To the extent that Trump tried to defend his obvious abuse, he presented evidence — I’m using the word “evidence” loosely — that was either demonstrably untrue, gibberish, self-defeating nonsense, or some combination thereof. Kevin Hassett, the director of the White House National Economic Council, did his best to carry the president’s water, but he too was reduced to absurdities, claiming that economic data will be more “reliable” and “trustworthy” just as soon as Trump replaces highly qualified career civil servants with people he likes who’ll confirm his baseless assumptions. Other countries have gone down this path, and it never ends well. Argentina and Greece, for example, played fast and loose with economic data for years, and it led to serious economic crises. In the former Soviet Union, Joseph Stalin similarly purined statisticians who failed to produce the data he expected to see.	https://thin.tiny.us/Aug6-judges-scoutingcamp-78	https://www.yahoo.com/news/articles/judges-scoutingcamp-alask-between-11000466.html	8/5/2025		DOJ, Immigration, Trump

How Trump Is Plotting To Disrupt The Next Election	Election Integrity	At a time when the U.S. job market is slowing down and prices remain high, ICE is offering \$50,000 signing bonuses and \$60,000 in student loan repayment with a salary of about \$50,000 to \$80,000. With a combination of executive orders, legal maneuvers and staffing decisions, President Donald Trump has already put in motion his next effort to subvert upcoming federal elections in 2026 and 2028. Since taking office, Trump has installed loyalists who follow his orders into key positions at the Department of Justice, issued executive orders centralizing decision-making within the White House, attempted to unilaterally change state and local election laws, demanded unprecedented access to voter data, dismantled election security protections, threatened elections officials and workers, law firms and others who have historically stood up to protect elections and defended, hired or pardoned those involved in previous efforts to subvert elections. All of these actions combine into a "concerted strategy" to undermine federal elections, according to a new report by the Brennan Center for Justice, a left-leaning nonprofit that advocates for voting rights. The report highlights how these actions are being used together to set the stage for future lies about election integrity and attempts by the White House to try to change the outcome of elections altogether. Trump whiffs on his easiest chance to 'drain the swamp'	Political Cesspool	Back in April, President Donald Trump said he would "absolutely" sign a bill banning members of Congress from trading stocks. Amid declining poll numbers and poor economic news, signing a ban would provide Trump an easy political victory ahead of the fall's government funding fights. The public overwhelmingly supports a ban, and there are multiple bills with bipartisan support in both houses of Congress. But when one proposed ban cleared a Senate committee vote last week, instead of halting the result, Trump attacked one of the bill's chief Republican supporters, Sen. Josh Hawley of Missouri. Why? Until not too long ago, insider trading laws did not apply to members of Congress. This went about as you would expect: Investigations revealed that lawmakers profited off of stock transactions made during the 2008 recession and the 2010 health care debate. In 2012, Congress passed the STOCK Act, which made insider trading laws applicable to members of Congress and their staffs, and required disclosures of trades within 45 days for both transparency and enforcement. His presidency was never about draining the swamp; he is the swamp. And even the blindest effort to rebut that image is, for him, a bridge too far.	https://tiny.cc/Auq5-trump-whiffs-80	https://www.yahoo.com/news/articles/trump-whiffs-easiest-chance-drain-swamp-100000127.html	8/5/2025	Trump, Ukraine, War

In the short term, the House of Representatives — which Democrats hope to win back in midterm elections next year to rein in Trump's presidency — could be at stake. Democrats currently need a net gain of three seats to take the majority, if the Texas plan passes without a response by another state, they will need eight. Why Trump's Texas battle over the House could end up affecting every American	Politics / Congress	There are growing signs American democracy is fraying. Republicans will argue, correctly, that Democrats have mounted their own egregious restricting schemes in states such as Illinois and Maryland. But the instigator of the effort to make the Texas congressional delegation even redder was a president who already has a dark record of trying to subvert the verdict of voters. Longer term, the national political fight that has erupted over Texas looks almost certain to further erode the checks and balances of democracy, however it ends. If both parties now simply go all-out in a national gerrymandering frenzy, they will produce a House of Representatives where it will be even more difficult for incumbents to lose their seats and that will make meaningful political change even harder.	https://tiny.cc/Auq5-wild-pigs-76	https://www.yahoo.com/news/articles/why-the-house-texas-battle-could-affect-every-040501130.html	8/5/2025	California, Wildlife, Weird World

Afghan women turn to online courses as the Taliban bans education	International / Human Rights	Jafari said he started providing online courses last December to help women in his homeland, and as an expression of gratitude for the help he received as a youngster alone in a foreign country. "The main goal was to give back to the community, especially to the Afghan women, what I had received from the other people for free," he said, sitting in his sparse one-room flat in downtown Athens. Jafari now has 28 female students in Afghanistan in three classes: beginner, intermediate and advanced. Aside from teaching, he also mentors his students in finding online internships and jobs using their new skills. With jobs report, Trump follows playbook of rejecting unfavorable data	Economy / Trump Administration	Trump has a go-to playbook if the numbers reveal uncomfortable realities, and that's to discredit or conceal the figures and to attack the messenger — all of which can hurt the president's efforts to convince the world that America is getting stronger. The Republican president's strategy carries significant risks for his own administration and a broader economy that depends on politics-free data. After the presidential election, a leader of the Texas chapter of the Three Percenters, a militia group, reportedly wrote to Trump to offer manpower in enacting mass deportations. But ICE and other federal agencies are engaging in forceful action against immigrants backed by the state in a way that surpasses what the Cath Keepers or the Proud Boys could ever do. RFK Jr. defends \$500M cut for mRNA vaccines with pseudoscience gobbledygook	Health / Politics	SARS-CoV-2, including its spike protein, is continually evolving, regardless of whether people are vaccinated or not, let alone what type of vaccine they've received. The virus racks up mutations as it continuously replicates. Some of these mutations help a virus evade immune responses, whether they're from vaccination or previous infection. These immune-evading mutations can accumulate and give rise to new variants or strains, making it part of a process called antigenic drift (not anti). Antigenic drift does reduce the efficacy of vaccines over time. It's why, for example, people can get influenza repeatedly in their lifetimes, and why flu shots are updated annually. However, it does not mean that vaccines are immediately rendered ineffective upon single mutations, as Kennedy says.	https://technica.com/path/2025/08/08/rfk-jr-defends-500m-cut-for-mrna-vaccines-with-pseudoscience-gobbledygook		RFK Jr. mRNA, Vaccines, Health Policy

U.S. Air Force to deny early retirement benefits to some transgender service members	Military / LGBTQ+ Rights	The U.S. Air Force said Thursday it would deny all transgender service members who have served between 15 and 18 years the option to retire early and would instead separate them without retirement benefits. One Air Force sergeant said he was "betrayed and devastated" by the move. An Air Force spokesperson told The Associated Press that "although service members with 15 to 18 years of honorable service were permitted to apply for an exception to policy, none of the exceptions to policy were approved." About a dozen service members had been "prematurely notified" that they would be able to retire before that decision was reversed, according to the spokesperson who spoke on condition of anonymity to discuss internal Air Force policy.	https://thn.tiny.us/Aug8-2025-50	https://www.npr.org/2025/08/08/mx-1-5459213/las-vegas-trump-tourism-decline	2025-08-08	Air Force, Transgender Rights, Military, Discrimination

How Oregon's Wildfire Risk Map Became a Target for Misinformation	Climate / Disinformation	A year after Oregon endures its most destructive fire season on record in 2020, state lawmakers order a map estimating the wildfire risk for every property in the state. It's the kind of rating now available on real estate sites like Zillow. The state wants to use the results to decide where it will apply firestorm codes for fire-resistant construction and protections around homes. Around the same time, insurance companies start dropping Oregon homeowners' policies and raising premiums to limit future losses, much as they have done in other disaster-prone states. Insurers have their own sophisticated risk maps to guide them, but some brokers instead tell homeowners the blame lies with the map the state produced. The belief gets treated as fact both on social media and in mainstream news — even though insurers and regulators say it's not true.	https://thn.tiny.us/Aug8-2025-54	https://www.npr.org/2025/08/08/mx-1-5459213/las-vegas-trump-tourism-decline	8-Aug-25	Oregon, Wildfires, Misinformation, Climate
Gold futures soar to record high after reports of US tariffs on Swiss bars	Economy / Trade	The price of gold futures have soared to a record high after it was reported that the US would put tariffs on imports of 1kg bars in a further trade blow to Switzerland, which dominates the world's refining industry. Swiss exports to the US were hit by a crippling 38% tariff on Thursday after the country's president returned empty-handed from a last-minute dash to Washington in an attempt to get the rate, among the highest imposed by Donald Trump, lowered.	https://thn.tiny.us/Aug8-2025-55	https://www.npr.org/2025/08/08/mx-1-5459213/las-vegas-trump-tourism-decline	August 8, 2025	Gold, Tariffs, Switzerland, Economy

Canadian cities cancel US Christian nationalist's performances	World / Religion	Eight Canadian cities have revoked performance permits for Sean Feucht, a Trump-supporting Christian nationalist preacher and musician, who led anti-gay demonstrations outside Disneyland and protested against mask mandates during the Covid-19 pandemic. Over the past two weeks, performances by Feucht, have been cancelled in Halifax, Nova Scotia; Charlottetown, Prince Edward Island; Montreal, New Brunswick; Quebec City, Quebec; Vaughan, Ontario; and Abbotsford, British Columbia. Local authorities cited safety concerns or code of conduct violations as reasons for cancelling his appearances. The municipal government in Winnipeg, Manitoba, denied Feucht a permit to perform due to "operational challenges". Chinese authorities are using nets, spraying insecticide and even deploying drones to fight the mosquito-borne chikungunya virus, which has infected thousands of people. Authorities had reported more than 7,000 cases of the virus as of Wednesday, mostly in the southern Chinese manufacturing hub of Foshan, some 170 kilometers (105 miles) from Hong Kong. California's wildfire moonshot: How new technology will defeat advancing flames	Climate / Science	A bolt of lightning strikes deep inside a California forest in the middle of the night. The spark becomes a flame, and within seconds, a satellite dish swirling overhead picks up on the anomaly and triggers an alarm. An autonomous helicopter takes flight and zooms toward the fire, using sensors to locate the blaze and artificial intelligence to generate a plan of attack. It measures the wind speed and fire movement, communicating constantly with the unmanned helicopter behind it, and the one behind that. Once over the site, it drops a load of water and soon the flames are smoldering. Appeals court rules Trump clamp-down on spending data defies Congress' authority	Politics / Law	A federal appeals court panel shot down a Trump administration bid to make secret a public database of federal spending that researchers say is crucial to ensure the administration is not flouting Congress' power of the purse.				
		The Trump administration ignited the legal battle when it decided in March to abruptly shut down the database, claiming the widely available public data threatened the president's ability to manage federal spending. Henderson noted that the decision came amid a torrent of lawsuits questioning whether the administration was preparing to illegally "impound" — or withhold — congressional mandated spending required by law to be disclosed. Trump admin claims Social Security, Medicare at risk if tariffs blocked	Economy / Politics	The flexible discs and other reusable menstrual products are gaining traction as alternatives to the billions of single-use pads and tampons that get tossed into landfills every year. Products such as the discs, silicone cups and period underwear can be reused for years, so they're cost-effective and long-lasting in addition to helping people reduce waste. The popularity of the reusable alternatives has grown since the pandemic, when it was easier to experiment with period products in the privacy of a home bathroom, according to women's health experts.			
		About 12 billion disposable pads and 7 billion tampons go into U.S. landfills every year, according to Dr. Luvani Semere, chief of obstetrics and gynecology at Kaiser Permanente Santa Clara. Pads are mostly plastic. Once they're in the landfill, they take up to 800 years to degrade, according to the National Institutes of Health.			
		Even as district officials questioned the claims underlying his emergency declaration, the president promised a "historic action" to rescue our nation's capital from crime, bloodshed, bedlam and squalor and worse." His rhetoric echoed that used by conservative politicians going back decades who have denounced American cities, especially those with majority non-white populations or led by progressive politicians, as lawless or crime-ridden and in need of outside intervention.			
		But for many residents, the prospect of federal troops surging into the district's neighborhoods represents an alarming violation of local agency. To some, it echoes uncomfortable historical chapters when politicians used language to paint historically or predominantly Black cities and neighborhoods with racist narratives to shape public opinion and justify aggressive police action.			
		President Donald Trump's tariffs are generating revenue for the federal government at an annual rate of about \$300 billion. While that sounds like a promising source of funding, tariffs went into effect with the stroke of a pen, and they can go away with one, too. And in the next recession, there will be calls for tariff relief to help consumers, Moody's Analytics chief economist Mark Zand said.			
		Housing costs have surged more than 50% since the pandemic, but the traditional price gap where new-construction homes cost significantly more than existing homes has narrowed. There are notable price drops and incentives, especially in the South and West, making new homes more affordable. Furthermore, new homes often provide better value per square foot, and builders tend to offer incentives.			
		The data shows employers "have all but stopped new hiring," and without the health-care sector, which is shielded from economic headwinds, we'd have lost 100,000 jobs. And while Trump touts the "rebirth of U.S. manufacturing," the sector has lost jobs for three straight months. Exactly how tariffs have affected the jobs market isn't clear, the same can be said for the impact of Trump's crackdown on migrant workers. But the whipsawing uncertainty generated by both "has surely affected business hiring and investment."			
		President Donald Trump's tax and spending law will deal a financial blow to the poorest Americans while boosting the net income of wealthier households, according to a new analysis from the Congressional Budget Office.			
		Trump said he declared a public safety emergency and invoked section 740 of the District of Columbia Home Rule Act, which gives the President of the United States the authority to commandeer DC's Police Department in "conditions of an emergency nature." Attorney General Pam Bondi is now in charge of the Metropolitan Police Department, he said.			
		"It's time for dramatic action," Trump said at a press conference that stretched to over an hour as he took questions on a wide range of topics. He did not specify how long the federal takeover of D.C. would last, though the executive order signed on Monday declared the Administration would take over D.C. law enforcement "for the maximum period permitted" under the Home Rule Act, which is up to 30 days unless Congress authorizes an extension.			
		Though Trump based on D.C., he also hinted that the capital city is just the beginning, mentioning New York City, Baltimore, and Oakland—cities in which he has much less jurisdiction.			
		Typically, the President would need Congressional approval for defense areas and the creation of essentially a 170-mile military installation, but the President's Day One declaration of a national emergency on the southern border in an Executive Order allowed him to sidestep this formalization.			
		At least 242 Palestinian journalists have been killed in Gaza since October 7, 2023, according to the United Nations.			
		Israel's military strikes and blocking of aid from Gaza have killed over 60,000 Palestinians, press advocates and experts calling it the deadliest conflict for journalists in recent history.			
		A global glut of lithium prompted a Chinese battery company to suspend production at a massive mine, triggering a rise in commodity prices and a jump in stock prices of lithium companies.			
		The Trump administration on Monday told a federal appellate court that overturning the president's tariffs could lead to a 1929-style depression that would endanger federal benefits like Social Security and Medicare.			
		The letter from Solicitor General D. John Sauer and assistant attorney general Brett Shumate claims the U.S. would be on the hook to repay trillions of dollars it hasn't actually been paid, from deals that haven't yet been fully signed.			

Trump names Heritage's E.J. Antoni to lead Bureau of Labor Statistics	Politics / Trump Administration	President Trump on Monday said he will nominate Heritage Foundation economist E.J. Antoni to lead the Bureau of Labor Statistics. Economists worry that Trump aims to politicize the agency, which publishes crucial, market-moving data on employment and inflation. Inside Ford's decision to double down on electric vehicles	Business / Energy	Ford's decision to invest \$5 billion in a new family of electric vehicles might seem crazy at this point, given how much the political winds have shifted against EVs since President Trump took office. More and more mainstream car buyers can't afford to buy a new Ford, which sells for an average of \$56,000. It's not just Ford, of course. The entire industry is facing an affordability crisis. At the same time, Chinese carmakers have figured out how to make inexpensive, high-quality, digitally advanced EVs, and they're quickly taking over the world. FDA says IV fluid shortage from hurricane is over	Health / Infrastructure	The nationwide shortage of critical intravenous saline fluid triggered by Hurricane Helene is over, though some other injectable solutions remain in shortage almost a year after the storm, the Food and Drug Administration said. FDA commissioner Marty Makary said in a statement on Friday that sodium chloride 0.9% injection products have been removed from the agency's list of current shortages. Companies including Fresenius and B. Braun Medical built up production during Baxter's downtime, HealthCares reported. For other IV fluids still in shortage, the FDA is working closely with manufacturers and monitoring the supply to ensure patients have access, Makary said. Inside Trump's power play for more control in D.C.	Constitutional Crisis	Trump has long criticized D.C.'s management and sought more federal control of the city during the Black Lives Matter protests in 2020. He showed Monday that his desire to score political points in the Democrat-run city — and dramatically exaggerate its problems — is very much alive. White House insiders said Trump's move also was prompted by his anger at seeing pictures of a wounded Edward Coristine, a former DOGE staffer known as "Big Balls" who was beaten and bloodied last week by a group of youths on a D.C. street. "When he saw a report on Fox about how bad I was in D.C., that was the final straw," one Trump adviser said. "He said he wanted it done. DC swells with law enforcement amid Trump 'crime emergency': Photos	Politics / Trump Administration	Violent crime is declining in D.C. — not rising, as President Trump claimed on Monday. D.C. crime hit a 30-year low in 2024, according to a Justice Department statement in January — down 35% from the city's 2023 crime wave. And for the first half of 2025, violent crime has dropped in all categories in Washington, according to new data from Major Cities Chiefs Association, an organization of law enforcement executives. Violent crime is down 29% from this time in 2024, per city police data. Will Tropical Storm Erin impact South Florida? Here's the system's projected path.	Climate / Weather	Even though the forecast models indicate a turn to the north, there is uncertainty about where and when that turn will occur. Trump's mass deportation campaign may lay waste to the Bill of Rights	Borders and Immigration	The suspect is a 32-year-old white man who has a history of mental health issues. Davis said the suspect "has a rap sheet" with the department and has been placed in emergency detention holds. According to Travis County, officials can place people in these emergency holds at psychiatric facilities when there is evidence of "imminent, substantial risk of serious harm to self or others." The data was obtained from ICE via a Freedom of Information Act request by the Deportation Data Project — a nonpartisan project headed by a law professor at Berkeley. It gives detailed information on each person arrested by DHS as of June 26. It shows DHS took down 15,000 people on the streets without any criminal history or removal orders since Inauguration Day. But in June alone, the figure was 7,000 — 90% were Latin American immigrants. There was a jump in these arrests immediately in January, but the recent shift has taken the operation to a whole new level. In June, one in five DHS immigration arrests targeted a Latino on the streets who had no criminal past nor a removal order against them.	https://ttn.tiny.us/avg12-trump-s-mass-deportation-campa-16	https://www.abc.com/news/2025-08-12/trump-s-mass-deportation-campaign-may-lay-waste-to-the-bill-of-rights/12744444	2025/08/12	Trump, deportation, Bill of Rights, ICE
U.S. allies think twice about buying F-35s in response to Trump's antics	Economy-Trade	The Trump administration recently let Swiss officials know that the cost of the planes will be more than previously estimated. The White House soon after hit Switzerland with harsh trade tariffs. As Politico reported, the developments are not sitting well in Bern. An order for 36 F-35 jets may become a casualty of Donald Trump's trade war against Switzerland as political opposition to the multibillion-franc defense deal surges in Bern. The backlash follows the U.S. president's decision to hit Swiss exports with a 39 percent tariff — the highest levied on any developed country and more than double the rate imposed on the European Union. In fairness, it's worth emphasizing that Switzerland hasn't canceled its investment, but there is an effort underway in the Swiss Parliament to end the order.	https://ttn.tiny.us/avg12-u-s-allies-think-twice-about-f-14	https://www.abc.com/news/2025-08-12/u-s-allies-think-twice-about-buying-f-35s-in-response-to-trump-s-antics/12744444	2025/08/12	F-35, US allies, military sales, Trump
ICE is now the highest-funded law enforcement agency. That's bad news for our democracy.	Borders and Immigration	Superman, literally an undocumented alien — like an actual alien from outer space — is now an ICE agent. You can't make this stuff up. The only real requirements to becoming an ICE agent these days seem to be a beating heart and an alignment with Trump's deportation crackdown. It's almost like the president is building an army of sycophants — and he has the money to do it. Trump's One Big Beautiful Bill Act set aside nearly \$170 billion for immigration enforcement and border security efforts, including \$75 billion in extra funding for ICE specifically, making ICE the highest-funded law enforcement agency in the federal government.	https://ttn.tiny.us/avg12-ice-is-now-the-highest-funded-15	https://www.abc.com/news/2025-08-12/ice-is-now-the-highest-funded-law-enforcement-agency/12744444	2025/08/12	ICE, funding, law enforcement, democracy
Under water: How FEMA's outdated flood maps incentivize a system in which risk is negotiable	Climate / Policy	Just to put this into perspective: ICE now receives more funds and resources than most national militaries. It's rapidly becoming the nation's largest domestic police force, its size and power doubling that of the FBI. It seems like the Trump administration is building up ICE to be an alternative force that's bigger, more politically loyal, unnumbered by standards and largely shielded from democratic accountability.	https://ttn.tiny.us/avg12-fema-s-outdated-flood-maps-89	https://www.abc.com/news/2025-08-12/under-water-how-fema-s-outdated-flood-maps-incentivize-a-system-in-which-risk-is-negotiable/12744444	2025/08/12	FEMA, flood maps, climate policy
Trump says he will 'flee' out Putin on ending Ukraine war	International / Diplomacy	A review of documents related to Camp Mystic — from county floodplain development records, an engineering study, FEMA flood map determinations and federal flood insurance studies — offers a window into a process that experts say plays out for thousands of properties each year, quietly shrinking the footprint of the nation's flood risk on paper, even as climate change makes flooding a more severe threat on the ground. The trail of documents from Camp Mystic details the ease with which property owners can remove how the federal government assigns flood risk. And they spotlight a national issue relevant beyond Texas: In some areas, FEMA's main tool for assessing flood risk is stuck in time. President Trump said on Monday that he plans to use a Friday summit in Alaska to gauge whether Russian President Vladimir Putin is ready to end his war on Ukraine — and said he'd been disappointed in the past with Putin's actions. "This is really a feel-out meeting, a little bit," Trump told reporters, predicting he would know "probably in the first two minutes" whether a deal would be possible.	https://ttn.tiny.us/avg12-trump-says-he-will-flee-out-putin-41	https://www.abc.com/news/2025-08-12/trump-says-he-will-flee-out-putin-on-ending-ukraine-war/12744444	2025/08/12	Trump, Putin, Ukraine, diplomacy

Judge denies release of Chisline Maxwell grand jury transcripts	Crime / Legal	A federal judge in Manhattan on Monday rejected the Trump administration's request to release grand jury transcripts from the Justice Department investigation into convicted sex offender Jeffrey Epstein's longtime confidant Chisline Maxwell. What's the deal with claims that birth control is harmful?	Health / Reproductive Rights	Experts warn cycle tracking can lead to a false sense of security when it comes to preventing pregnancy, as it's difficult to predict fertility accurately. One study showed an 8% to 9% failure rate among users of one app to avoid pregnancy. (Hormonal birth control methods have a failure rate of less than 1%, when used correctly) Complaints about birth control get conflated with another, real issue — that women often feel overlooked in medical settings, says Pfender. Posts that underscore "disfranchised medical experiences that involve being silenced or ignored as a woman," get a lot of attention, she says. In recent months, immigrants working in manufacturing, food production and other industries have lost their jobs due to President Trump's immigration policies — not as a result of immigration raids, but because Trump ended Biden-era programs that had provided them temporary permission to remain in the U.S. and get jobs. Those affected include more than a half-million immigrants from Cuba, Haiti, Nicaragua and Venezuela who had been granted humanitarian parole for two years through a program known as CHNV — an acronym for the countries it covered. The changes also affect close to 1 million immigrants who were allowed into the U.S. after securing appointments at the U.S.-Mexico border via a U.S. government app.	https://ttn.tiny.us/avg12-what-s-the-deal-with-claims-th-36	https://www.abc.com/news/2025-08-12/whats-the-deal-with-claims-that-birth-control-is-harmful/12744444	2025/08/12	birth control, reproductive rights, health misinformation

		A formal recognition will be made at the United Nations General Assembly next month, where "Australia will recognize the right of the Palestinian people to a state of their own predicated on the commitments Australia has received from the Palestinian Authority," Abanese said at a press conference. On Monday, New Zealand's Foreign Minister Winston Peters said his country was also considering recognizing a Palestinian state, and would make a decision at a cabinet meeting in September. Regrettably, after the Post got finished showing "what the data shows," someone (I'd bet an editor) added this sentence: "Not captured in statistics, though, is the grief, pain and shattered sense of safety that follow each crime." Oh, please. In the context of an imminent and deeply troubling federal takeover of the city's police force, I put that statement somewhere between rationalization and abject surrender. Similarly craven was the Post's subsequent framing of the matter as a dispute between a president who thinks violent crime is going up and a D.C. mayor who thinks it's going down. 		The real "crime," bedlam, and "squalor" engulfing the capital emanate not from D.C.'s not especially mean streets but from the White House itself. Don't let's forget that the president was convicted a mere 15 months ago on 34 felony counts of fraud related to the 2016 election; in January, the judge in that case sentenced Trump to something called an "unconditional discharge" that allowed Trump's crimes to go unpunished. During a Monday press conference on Trump's federal takeover of D.C., Hegseth announced that the National Guard will be "flowing into the streets of Washington in the coming weeks" and that "there are other units we are prepared to bring in—other National Guard units, other specialized units." "They will be strong, they will be tough, and they will stand with their law enforcement partners," Hegseth said. And "this is nothing new for DOD," he added. Hegseth's Rant on D.C. Takeover Turned Into Evidence Against Trump Hegseth Threatens Another Civil War to Defend 'Proud' Confederate History	Politics / Trump Administration Extremism	Defense Secretary Pete Hegseth has vowed not to back down from celebrating America's "proud" Confederate history. For two months, several Democratic members of Congress have been unable to enter a downtown L.A. processing center run by U.S. Immigration and Customs Enforcement, prompting widespread complaints and a federal lawsuit. On Monday, the Congress members got their first look at the basement facility known as B-18. But Reps. Brad Sherman, Judy Chu and Jimmy Gomez said that they were left with more questions than answers — and accused the government of sanitizing the center. "They wanted to show us nothing," said Gomez, whose district includes downtown L.A. "It was nothing, it was like no one was there. The leader of the National Security Council's biosecurity directorate recently resigned. His staff had been pushed out, and his unit is now defunct. The Office of Pandemic Preparedness and Response Policy, established by Congress in 2022, has devolved from a staff of about 20 under President Joe Biden to a staff of zero.	https://thn.tiny.us/aug12-no-one-to-keep-the-white-house-know-71	https://www.yahoo.com/news/australia-recognize-palestine-120000788.html	2025/08/12	Trump, DC, National Guard
		In Trump's second term, his team has fired thousands of public-health experts at the CDC, the FDA, and other agencies. It has canceled investments in safeguards against pandemic influenza, undermined confidence in vaccines, and cut funding for potential future outbreaks. It killed USAID and is scaling down the CDC's global role, canceling many of the programs that maintained ties to countries where disease outbreaks occur. It has withdrawn the U.S. from the World Health Organization, and it has created confusion about who in the U.S. government is in charge of the system for tracking deadly biothreats, whether naturally occurring, accidental, or deliberate.	https://thn.tiny.us/aug12-m-going-to-russia-trump-appears-to-forget-alaska-is-in-us-as-he-frets-over-facing-putin	https://www.yahoo.com/news/australia-recognize-palestine-120000788.html	2025/08/12	Ebola, public health, White House

Trump Plots Crackdown After Seeing Homeless People on the Road to His Golf Course	Politics / Trump Administration	Donald Trump vowed a headline crackdown on homeless people living in Washington, D.C., after seeing people camping out on the route to his golf course, according to a report. The Trump administration has claimed that those who "self-deport" now will get the chance to reenter the U.S. later. ("Self-deport" is not a legal term; two Mexican American statisticians invented it over 30 years ago.) But leaving the country without following specific legal procedures could make it far more difficult to return — and the administration has consistently failed to inform people in immigration proceedings of crucial details that could affect their future cases.	https://thn.tiny.us/aug12-trump-has-a-powerful-strategy-53	https://www.yahoo.com/news/australia-recognize-palestine-120000788.html	2025/08/12	Trump, homelessness, golf
Trump Has A Powerful Strategy To Get Immigrants To 'Give Up'	Borders and Immigration	In his first term, President Donald Trump spun alternative realities. In his second, he's making everyone live in them. Trump's Washington, DC, crackdown sits well within another trend of an increasingly authoritarian second term — his desire to militarize civilian functions of the government and law enforcement. He sent thousands of active-duty troops to the southern border. He deployed National Guard troops and US Marines to Los Angeles after unrest over immigration raids. Trump's call for extreme solutions that only a strongman like him can provide is the kind of extremism that worried the Founders more than 250 years ago. Alexander Hamilton wrote in Federalist 1, for instance, that history showed leaders who overthrew liberty did so by "commencing demagogues, and ending tyrants."	https://thn.tiny.us/aug12-trump-a-tax-law-will-mostly-benefit-the-rich-50	https://www.yahoo.com/news/australia-recognize-palestine-120000788.html	2025/08/12	Trump, tax law, CBO, inequality
Trump's Washington, DC, crackdown is a political stunt. But it could take a much darker turn	Politics / Trump Administration	President Donald Trump's tax and spending law will result in less income for the poorest Americans while sending money to the richest, the nonpartisan Congressional Budget Office reported Monday. The CBO estimates that the 10% of poorest Americans will lose roughly \$1,200 a year as they experience restrictions on government programs like Medicaid and food assistance, while the richest 10% of Americans will see their income increase by \$13,600 from tax cuts. Overall, American households will see more income from the tax cuts in the legislation, including middle income households, but the largest benefit will go to the top 10% of earners. But the government can revoke the citizenship of naturalized, foreign-born Americans—who make up more than 7% of the population, about 25 million people—through a legal process known as denaturalization, which returns them to the immigration status they held before naturalizing. At that point, deportation proceedings can begin. And in June, the Justice Department said its Civil Division had been directed by Trump to "maximally pursue denaturalization proceedings in all cases permitted by law and supported by the evidence."	https://thn.tiny.us/aug12-zelensky-rejects-trump-s-suggest-53	https://www.yahoo.com/news/australia-recognize-palestine-120000788.html	2025/08/12	Trump, citizenship, immigration

		National Guard troops called on to active-duty by President Donald Trump arrived at the footsteps of the Washington Monument on Tuesday as part of his plan to address what he insists is "out of control" crime in the nation's capital. "That's part of our assignment – to go to the national monuments and be present," he told ABC News. The deployment of troops on U.S. soil is legal to an extent, with the president holding the power to wrangle service members in times of extraordinary crisis. But their duties are also limited to protecting federal personnel and federal property unless the president declares an insurrection, which he has not done. It was not immediately clear why the presence of U.S. troops along the National Mall was needed, other than to put Trump's orders on display. The area, marked by museums, monuments and long stretches of grass, is known as a relatively safe part of the city that attracts mostly tourists and school groups. Texas House Democrats who left the state to prevent a vote on new congressional maps will return to Texas, feeling they have accomplished their mission of killing the first special session, raising awareness and sparking national backlash about the mid-decade redistricting, multiple sources confirmed to ABC station KTRK and ABC News on Tuesday. The White House plans to conduct a wide-ranging review of the Smithsonian Institution's museum exhibitions, materials and operations ahead of America's 250th anniversary next year to ensure the museums align with President Donald Trump's view of American history, a White House official confirmed to ABC News. Roughly nine hours after President Donald Trump declared a public safety emergency in Washington, D.C., and took control of the city's police force, a 33-year-old man was shot and killed in Logan Circle, less than a mile from the White House, officials said. The Centers for Disease Control and Prevention Director Susan Monarez sent a note to the company's more than 10,000 employees Tuesday afternoon, directly blaming the role of the promotion of misinformation in the deadly shooting at the CDC. During a news conference, Chris Hoesy, director of the Georgia Bureau of Investigation (GBI), said almost 500 shell casings were recovered. Of those rounds, about 200 struck facilities on the CDC campus. It's unclear how many came from the gunman and how many came from law enforcement exchanging gunfire. The country's largest private prison companies are reporting significant profits amid an aggressive push by the Trump administration to increase immigration arrests and deportations. During earnings calls last week, executives with the firms Geo Group and CoreCivic announced an increase in revenue from new and current contracts with Immigration and Customs Enforcement, and discussed their plans to expand their businesses to meet the administration's demands. 	A US appeals court on Tuesday rejected a bid by a group of unions to block the Trump administration government downsizing team known as the "department of government efficiency" (Doge) from accessing sensitive data on Americans.	https://thn.tiny.us/Aug13-2025-aug-3-trump-doge	https://www.fbe	August 13, 2025	
US court says Trump's Doge team can access social security numbers and other sensitive data	Surveillance & Civil Liberties A dissenting judge said it was prudent to temporarily block access to the data while the case plays out, and that the standard his colleagues had imposed on the plaintiffs was too high. A grassroots organization of health professionals have released a report outlining major health challenges in the US and calling for the removal of Robert F. Kennedy Jr from the US Department of Health and Human Services (HHS). The report from Defend Public Health, a new organization of about 3,000 health professionals and allies, is an attempt to get ahead of misinformation and lack of information from health officials. "The Maha report is essentially a distraction from the real causes of poor health," said Elizabeth Jacobs, professor emerita at the University of Arizona and a founding member of Defend Public Health. "This administration does not want to address things like poverty and education and access to healthcare. Instead, they're distracting the public with information on solutions to problems that don't actually exist. 'Distracting the public': group of health professionals call for RFK Jr to be removed	Public Health Travel to the US by Canadian residents has continued to drop significantly for the seventh month in a row, as new data confirms that Donald Trump's threats have helped upend the summer tourism season. Months of aggressive rhetoric from the White House have prompted widespread boycotts of US products by Canadians, who have also sworn off visits to their southern neighbour amid lingering feelings of betrayal and anger. The lessons of Helsinki are clear: putting Donald Trump alone in a room with Vladimir Putin is an unpredictable – and often dangerous – affair. By the time he came out of the room, Trump looked dazzled by the Kremlin leader. Asked at a press conference about the conclusions of the US intelligence community that Russia had interfered in the elections, Trump said: "President Putin says it's not Russia. I don't see any reason why it would be." But Putin will still try his luck to shape Trump's image of what a peace deal could entail in a way that will bring maximum benefit to the Kremlin. Putin "wants a deal with Trump that will be presented to Kyiv and other European capitals as a fait accompli," wrote John Herbst, senior director of the Atlantic Council's Eurasia Center and a former ambassador to Ukraine. The lack of invites for European leaders "has the smell of the Yalta Conference in 1945, where the United States, the Soviet Union, and the United Kingdom decided the fate of half of Europe over the heads of those nations."	https://thn.tiny.us/Aug13-2025-2025-aug-canada	https://www.fbe	2025-08-13	RFK Jr, Health Policy, Trump Administration
Canadians steer clear of US as travel from north falls for seventh month	International Relations A number of wild rabbits have been spotted hopping around with nightmarish facial growths across Fort Collins, Colorado. Photographs of the skinned mammals taken by locals are not for the faint-hearted, that's for sure, as the bunnies appear to be cursed with dark, stubby tentacles protruding out of their skin. If's the cottontail papilloma virus (CPRV) at work - giving rise to the 'jackalope' myth (rabbit with antlers) in modern times - which causes benign, low-carcinoma tumours to materialise on the head of the animals. Emergency managers are urging many residents of Alaska's capital city of Juneau to evacuate as summer glacial flooding driven by climate change threatens to inundate the area. Authorities say flooding from the Mendenhall River will likely crest around 4 p.m. Alaska time on Aug. 13, or 8 p.m. Eastern. They hope two miles worth of emergency flood barriers they finished installing last month will hold back the waters from Mendenhall Valley, where a majority of Juneau's 32,000 full-time residents live. He would prefer the United States follow his church's example, which allows heads of households to vote in church elections. Unmarried women qualify as voting members in his church. The Supreme Court is Being Tested on Whether Parental Rights Apply Equally in Blue and Red States	Courts / Civil Rights	In Tuesday's ruling, the U.S. Court of Appeals for the 8th Circuit released a 8-2 decision in Brandt v. Griffin, holding that Arkansas' ban on gender-affirming care for minors survives three different challenges to its constitutionality. In part, this ban ruling followed Skimmet, in which the Supreme Court's conservative supermajority held that a similar ban does not violate the equal protection clause because it does not classify based on transgender status or sex, thus surviving the minimal evaluation standard of rational basis review. However, in Skimmet, the court denied a petition by minors and their parents that argued the ban also infringes on parental rights protected under the due process clause. Moreover, no one has argued that the Tennessee ban conflicts with the freedom of speech of health care providers protected under the First Amendment. 		Quite a few people will also read the 2024 reports, published yesterday. But they will do so for very different reasons. The original drafts were ready in January, before the Biden administration left office, following the usual practice. In past years, the reports were published in March or April. But this year they were delayed for several months while President Donald Trump's political appointees, including Michael Anton, the MCCA intellectual who is now the State Department's director of policy planning, rewrote the drafts. Some of the changes affect the whole collection of documents, as entire categories of interest were removed. The Obama administration had previously put a strong focus on corruption, on the grounds that kleptocracy and autocracy are deeply linked, and it started collecting information on the persecution of sexual minorities. Over the past few weeks, as the new reports were being prepared, I spoke with former officials who had seen early versions, or who had worked on the reports in the past. As many of them expected, the latest reports do not address systemic discrimination against gay or trans people, and they remove observations about rape and violence against women.	https://thn.tiny.us/Avg14b-trump-definition-human-72	https://www.yaho	August 14, 2025

I Walked Through Trump's D.C. Hellcape. It's Now Clear What Exactly the Feds Are Doing Here.	Civil Rights / Law Enforcement	At the Mall on Tuesday, I felt a surge of recognition when I saw a crowd of 6-year-olds rush by clutching pencils and pads, clearly engaged in some kind of scavenger hunt. That's what the National Guard and federal agents will be doing in D.C. isn't it? They'll spend most of their time roaming around, searching for the petty crimes and aesthetic offenses on the list they've been given: a ill pint, an open beer, a tent pitched under an overpass, men looking for work outside Home Depot. The point of a scavenger hunt is not to produce anything of value: the items on the list don't add up to any coherent, meaningful narrative. Ice dices slingshot across a metal surface all on their own - Ars Technica	Weird world	"It initiated a sea change in how the Department of Education regulates educational practices and classroom conduct, causing millions of educators to reasonably fear that their livelihood, and even beneficial, speech might cause them or their schools to be punished," Gallagher wrote. A few years ago, Boreiko's lab experimentally demonstrated a three-phase Ledentrost effect in water vapor, liquid water, and ice. The Ledentrost effect is what happens when you dash a few drops of water onto a very hot, sizzling skillet. The drops levitate, sliding around the pan with wild abandon. If the surface is at least 400° Fahrenheit (well above the boiling point of water), cushions of water vapor, or steam, form underneath them, keeping them levitated. The effect also works with other liquids, including oils and alcohol, but the temperature at which it manifests will be different. Boreiko's lab discovered that this effect can also be achieved in ice simply by placing a thin, flat disc of ice on a heated aluminum surface. When the plate was heated above 150° C (302° F), the ice did not levitate on a vapor the way liquid water does. Instead, there was a significantly higher threshold of 550° Celsius (1,022° F) for levitation of the ice to occur. Unless that critical threshold is reached, the meltwater below the ice just keeps boiling in direct contact with the surface. Cross that point and you will get a three-phase Ledentrost effect.	https://thn.tiny.us/Avg15-ice-does-slingshot-across-a-metal-su	https://www.yaho	2025-08-15	science, physics, ice discs, friction, experiments

		Social Security "looks more threatened than ever," is how AP puts it. The Social Security Administration, the agency that oversees the program, lost thousands of employees this year, including senior executives with deep understanding of how the program works. The field offices, Social Security's "front door" where the public goes for help to sign up for benefits, getting cards, etc., are facing a staffing crisis, per a recent report from the Strategic Organizing Center. PPI report: US tariff cost burden will define the Trump-era economy	Economy / Trade	New inflation data confirms anecdotes from Corporate America: U.S. importers are bearing the brunt of tariffs so far — costs that look set to be passed along to consumers. The Producer Price Index, a measure of prices paid to wholesalers, came in fiery hot, rising 0.9% in July — the biggest gain in three years. For context, economists expected a mere 0.2% monthly increase, following a flat reading in June. Rich Americans are spending at a higher rate this year — everyone else is basically slowing their roll. Spending increased nearly 2% in July from last year for higher income households, and 1% for middle-earners, according to a Bank of America Institute analysis released earlier this week. For the lowest third of households, those earning roughly \$50,000 a year or less, spending growth was zero, zip, zilch, nada — 0.0%, per the analysis, which looked at internal credit- and debit-card spending data from BoFA.	https://thn.kiny.us/avg15-08-14-trump-tariffs-economy-ppp	https://www.axios.com	August 15, 2025

Border Patrol agents in L.A. show up outside of Gov. Gavin Newsom's redistricting press conference - CBS Los Angeles	Borders and Immigration	U.S. Border Patrol agents appeared outside of the Japanese American National Museum on Thursday morning as Gov. Gavin Newsom and other state and local leaders were conducting a news conference announcing a plan to move forward with a redistricting plan. A group of masked agents showed up in trucks outside of the news conference. U.S. Border Patrol Chief Gregory Bovino said agents were conducting "young patrols" in the area. Bovino confirmed to CBS Los Angeles that one person was arrested outside the museum. How? By convincing U.S. freight railroad companies to switch from diesel power to rechargeable batteries — part of a business model Langer estimates could make her company, Voltify, as much as \$10 a year.	https://thn.kiny.us/avg15-news-border-patrol-gov-gavin-newsom-new	https://www.cbs.com	August 15, 2025	Border Patrol, Gavin Newsom, L.A., immigration, redistricting

Gen Z and millennials are taking over bingo halls, survey finds	Weird world	According to research, there has been a rise in younger people going on bingo nights and, while it might be far from a full house, 44 per cent of those visiting for the first time are under 35, fuelled by a desire to spend less money on alcohol. With Kennedy leading HHS, this about-face is easy to parse as yet another anti-vaccine move. But the assault on mRNA is also proof of another kind of animus: the COVID-revenge campaign that top officials in this administration have been pursuing for months, attacking the policies, technologies, and people that defined the U.S.'s pandemic response. As the immediacy of the COVID crisis receded, public anger about the American response to it took deeper root — perhaps most prominently among those critics who are now Trump appointees. Alligator Alcatraz's New Cousin: 'Deportation Depot' Opens In Sanderson, FL	Weird World	Florida Gov. Ron DeSantis announced plans to open a second immigration detention center, dubbed "Deportation Depot," as a step to expand the state's capacity to hold and deport undocumented immigrants. The expectation is that it will be able to hold more than 1,300 detainees comfortably and could export detainees approximately 2,000 through temporary dormitories. A nonprofit anti-vaccine group founded by Robert F. Kennedy Jr. said it is funding a lawsuit against him, in his capacity as secretary of the US Department of Health and Human Services, for failing to establish a task force to promote the development of safer childhood vaccines. US military deploying over 4,000 additional troops to waters around Latin America as part of Trump's counter-cartel mission	Military / Foreign Policy	U.S. Citizenship and Immigration Services, the federal agency overseeing the country's legal immigration system, instructed officers on Friday to consider additional factors when determining whether immigrants applying for U.S. citizenship have a "good moral character." Typically, legal immigrants with U.S. permanent residency, also known as a green card, can apply for naturalized American citizenship after a 3- or 5-year period, depending on their case. Demonstrating "a good moral character" has long been one of the requirements in U.S. immigration law for American citizenship, alongside passing English and civics tests.	https://thn.tiny.us/Aug18-2025-54	https://www.yahoo.com/news/us-military-deploying-over-4000-additional-troops-to-waters-around-latin-america-as-part-of-trumps-counter-cartel-mission-180800283.html	August 18, 2025	Trump, Military, Latin America, Cartels, Foreign Policy

Trojan horse bacteria sneak cancer-killing viruses into tumors	Health / Medicine	Scientists have engineered a groundbreaking cancer treatment that uses bacteria to smuggle viruses directly into tumors, bypassing the immune system and delivering a powerful one-two punch against cancer cells. The bacteria act like Trojan horses, carrying viral payloads to cancer's core, where the virus can spread and destroy malignant cells. Built-in safety features ensure the virus can't multiply outside the tumor, offering a promising pathway for safe, targeted therapy. 		We're mortality rates, and these facts stem from an analysis we did of death rates in 22 countries from 1980 through 2023 (the last year with reliable data). When we set out to do this research, we expected to find a story about the COVID-19 pandemic. America's pandemic experience was much worse than that of our peers, with three U.S. deaths for every two in peer countries. Nonetheless, Americans in particular were hit harder than nonelderly populations in other rich countries. This disadvantage only grew as vaccinations became available but were adopted by Americans at lower rates.				
		But our research also uncovered one population for whom the pandemic does look like a longer-term turning point for the worse. And that population is a worrisome one: Americans early in their adulthood, those aged 25 to 44—that is, millennials, as well as some older members of Gen Z.				
		The result of all this? By 2023, American early adults' chance of dying was 70 percent higher than it would have been had the lifesaving trends of the early 2000s continued. And this leaves them 2.6 times as likely to die as early adults in other rich countries. Amid declining economic prospects and future optimism among younger American adults, perhaps no statistic more starkly captures the disadvantage of entering adulthood in the U.S. today.				
		But the fact that death rates have remained high across so many kinds of deaths, from car collisions to fatalities from circulatory diseases and diabetes, hints at more encompassing and systemic problems.				
		People who are 25 to 44 have experienced major turning points in this country's history. The oldest of them were Reagan babies who launched their careers in the shadow of the Great Recession, and the youngest entered adulthood during a worldwide pandemic.	https://rhn.kinyus.com/3306-millennials-gen-z-death	https://state.com/v	Aug 21, 2025	Millennials, Death We're exhausted.

Why stateless people fear Trump's immigration crackdown	Borders and immigration	Ambartoumian-Clough and her family never registered as citizens of Ukraine, the result of bureaucratic chaos and changing nationality laws at the time. Unbeknownst to them, the family was actually excluded from registering as citizens of Ukraine or Georgia (where her father was from) because they fled during the post-Soviet upheaval. Ambartoumian-Clough has spent nearly her entire life stateless — not legally recognized as a citizen of any country. AI is a Mass Delusion Event - The Atlantic	Technology / Media	The interview triggered a feeling that has become exceedingly familiar over the past three years. It is the sinking feeling of a societal race toward a future that feels bloodless, hastily conceived, and shroudingly accepted. Are we really doing this? Who thought this was a good idea? In this sense, the Accesa interview is just a product of what feels like a collective delusion. 		The internet connected humanity — but an AI-driven shift to a machines-first network will force us to rewrite 30 years of habits, expectations and beliefs about how online life works. As AI agents improve and multiply, bots representing individuals will interact with bots representing companies, and human use of the open web will continue to decline. My bot will talk to your bot — but you and I will probably talk a lot less. These pricing systems can rapidly become complex "beyond human cognitive limits," as one study has already found.	https://tiny.tiny.us/Aug22-what-happens-1			
What happens when AI bots take over the internet from humans	Technology / AI	To cope with that, AI makers will respond by offering buyers their own AI-based tool to represent their interests in transactions with AI pricing bots. Then we will all sit back and watch as AIs representing both sellers and buyers have at it. The world of AI-generated, adversarial disinformation is growing rapidly — and it's already indistinguishable from run-of-the-mill social posts. Foreign disinformation has become a highly disruptive force in the U.S., with Russia and other foreign powers seeking to influence elections and inflame discord. Generative AI is now making it far more effective and harder for average users to detect. "We are seeing now an ability to both develop and deliver at an efficiency, at a speed, at a scale that we've never seen before," Gen. Trump's pay-me capitalism puts squeeze on Apple, other corporations	Economy	In Trump's America, everything has a cost. Businesses wanted a pro-management, low-regulation, bigger-is-better administration. They, by and large, are getting that. The price? Adhering to Trump's priorities, paying whatever tariffs and cuts off the top he dictates, moving their operations where he wants them to, and toeing the line on his social priorities. Trump himself has leaned into this frame, repeatedly likening the U.S. to a department store, and describing himself as the store manager, setting the prices to do business there. Judge halts Alligator Alcatraz expansion over environmental risks	Borders and Immigration	A federal judge in a ruling Thursday night prohibited state and federal officials from bringing new detainees to Alligator Alcatraz, the hastily built immigration detention site in the Everglades. The ruling also demanded the state begin dismantling elements of the facility — including temporary fencing, lighting fixtures and generators, among other equipment — within 60 days. The case is just one example of how the food we eat can interact with medications in unpredictable ways. There is a rich body of medical literature detailing bizarre — and sometimes worrying — occasions when foods have combined with drugs to produce unusual side-effects. While most of this exists as anecdotal reports of individual or small clusters of cases, there there is also now a growing body of research detailing the several ways that foods, drinks and herbs can interact with pharmaceuticals inside the human body. Grapefruit, for example, has long been known to boost the power of a wide range of drugs, increase the risk of side effects or even make normal doses toxic. F.B.I. Plans to Lower Recruiting Standards, Alarming Agents	Politics / Security	Around the country, President Donald Trump is circumventing the Senate to install top federal prosecutors, using loopholes to keep loyalists in place. In U.S. attorney's offices in Los Angeles, Nevada, New Jersey, New Mexico and update New York, the administration has effectively sidestepped or overridden both the Senate confirmation and judicial appointment processes for selecting U.S. attorneys. When Trump's nominees can't get confirmed by the Senate, as required by federal law, the administration installs them on a temporary basis as "interim" U.S. attorneys, who are legally allowed to serve for 120 days. And when district judges have then rejected Trump's choices by exercising a 160-year-old power allowing them to appoint someone to the office after an interim U.S. attorney's term ends, the administration has in a few cases taken an extraordinary step: voiding the judges' decision and reinstalling Trump's desired prosecutor as an "acting" U.S. attorney, who can serve for an additional 210 days beyond the initial 120-day interim period.	https://tiny.tiny.us/Aug22-trump-business-68	https://www.nytimes.com	Aug 22, 2025	FBI, Recruitment, Trump

COVID Revisionism Has Gone Too Far	Health / COVID	The books make some valuable points. Some pandemic restrictions remained in place for far too long, especially after vaccines became available, and public health experts did make several costly mistakes. Their mass support for the George Floyd protests, at a moment when they were otherwise warning against any public gatherings, was particularly damaging to their credibility. But the broader revisionist narrative—that the people in charge imposed sweeping restrictions that they knew were pointless—is a dangerous overcorrection. The political right already believes that America's pandemic response was illegitimate and is using that as a pretext for waging war on the country's public health apparatus. If the center and left succumb to the nihilism that runs through both of these books, no one will remain to defend sensible public-health measures the next time a pandemic comes around. The past few years have been terrifying for Soares and Hendrycks, who both lead organizations dedicated to preventing AI from wiping out humanity. Along with other AI doomers, they have repeatedly warned, with rather dramatic flourish, that bots could one day go rogue—with apocalyptic consequences. But in 2025, the doomers are tilling closer and closer to a sort of fustian. "We've run out of time" to implement sufficient technological safeguards, Soares said—the industry is simply moving too fast. All that's left to do is raise the alarm. In April, several apocalypse-minded researchers published "AI 2027," a lengthy and detailed hypothetical scenario for how AI models could become all-powerful by 2027 and, from there, extinguish humanity. "We're two years away from something we could lose control over," Max Tegmark, an MIT professor and the president of the Future of Life Institute, told me, and AI companies "still have no plan" to stop it from happening. His institute recently gave every frontier AI lab a "D" or "F" grade for their preparations for preventing the most existential threats posed by AI.	https://tiny.tiny.us/Aug22-covid-revisionism-64	https://www.thefix.com	August 22, 2025	COVID, Revisionism, History

Trump's bill a 'death warrant' say parents of sick rural kids whose treatment is tied up in Medicaid red tape	Health Policy	Other families with sick children dependent on Medicaid, and who live hours away from the specialized hospitals where their kids get treatment, also told The Independent they seriously fear for the future. Hospital infrastructure in rural areas is limited, so children with complex medical needs are forced to travel to big cities for treatment, often at great expense. The cuts in Trump's bill will create additional financial strain on already struggling rural healthcare facilities, creating a ripple effect when it comes to children's health, advocates warn. Scared and angry: Here's why workers unionized at Yosemite, Sequoia national parks	Labor	This summer the scales tipped. More than 97% of employees at Yosemite and Sequoia and Kings Canyon national parks who cast ballots voted to unionize, with results certified last week. More than 600 staffers — including interpretive park rangers, biologists, firefighters and fee collectors — are now represented by the National Federation of Federal Employees. "Happy Labor Day" sounds especially off-key this year because the National Labor Relations Board is on the ropes. The NLRB is the government agency that adjudicates private-sector disputes between labor and management. It oversees union elections and punishes labor law violations (excepting wage theft, which is policed by the Labor Department). Sustaining organized labor even at its severely depressed current level would be impossible without a functioning NLRB. But last week, the Fifth Circuit Court of Appeals ruled the NLRB's 90-year-old structure unconstitutional, pushing future elections of labor law very much into doubt. Well, they aren't coming for your liquor cabinet exactly, but MAGA is America's new prohibitionists. Prohibitionism was the largest and most successful reactionary culture war in American politics. Opinion - MAGA: America's new prohibitionists	Opinion/Politics	Mostly, however, Alford's events were civil, if tense. Some questioners focused on local issues, such as how Donald Trump's tariffs have affected Missouri farmers. Several attendees asked Alford about Trump's deployment of federal agents and the National Guard in Washington, D.C. in the city of Lebanon, a combat veteran named Josh asked whether Alford was prepared to stop the president from sending troops into Missouri. In St. Robert, a high-school government teacher asked Alford "what's so conservative" about losing troops on the U.S. capital. (Alford's response was to suggest that cities should be grateful for the extra help. When Kansas City co-hosts the men's World Cup in 2026, would Missourians not hope to see the National Guard helping out?) “Trump paid El Salvador \$5M to jail deportees – with conditions on abortion and DEI but not preventing torture The Independent”	Borders & Immigration	A secret memo between the United States and El Salvador reveals the Trump administration's \$5 million deal for Nayib Bukele's government to jail dozens of Venezuelan immigrants deported from the country earlier this year. According to a term sheet made public in court filings this week, the Trump administration agreed to pay the Salvadoran government \$4.87 million to detain deportees at the notorious Terrorism Confinement Center, or CECOT, a brutal prison that human rights groups have condemned as a “tropical gulag.” Under terms of the deal, El Salvador was prohibited from using the money to support drug traffickers and “mass migration caravans” to the U.S. Mexico border — as well as abortion care and support for diversity, equity and inclusion initiatives. But the deal does not explicitly prohibit immigrants from being tortured, experiencing abuse or being held indefinitely inside one of the western hemisphere's most notorious jails, where more than 250 Venezuelan immigrants deported by the Trump administration spent more than four months before they were sent back to their home country.	https://thn.tiny.us/20250911immigration15	https://www.inde	2025-09-11	rump, elsalvado 20250911immigration15
		A second boat in a Gaza-bound aid flotilla carrying activists including Greta Thunberg has been hit by a “suspected drone,” the group has claimed. Activists and aid workers traveling as part of the Global Sumud Flotilla (GSF) said the boat, Alma, which is sailing under a British flag, was “attacked” while docked in Tunisian waters on Tuesday morning. The group said nobody on board was hurt, but the vessel sustained fire damage on its top deck. Thousands of people filed the Missouri Capitol on Wednesday to protest Republican-led redistricting. The protest opposed the Republican plan to gerrymander the state and make it harder for voter-led constitutional amendments to pass. The DOGE team, and Bisignano, have prioritized scoring quick wins that allow them to post triumphant tweets and press releases — especially, in the early months, about an essentially nonexistent form of fraud — while squandering the chance for systemic change all an agency that genuinely needs it. If Trump wanted to endorse domestic violence decriminalization, he may take some comfort in the status quo: as it is, about 24% of adult American women have been the victims of “severe physical violence” by an intimate partner, according to the National Domestic Violence Hotline; the Centers for Disease Control, meanwhile, puts the proportion of women who have experienced “contact sexual violence, physical violence, or stalking by an intimate partner” at 41%, and many of those incidents are not reported or not prosecuted — meaning that the perpetrators are free, and that their assaults have been treated as fully “criminal.” “Unless you're a farmer, a hunter or a fisher, there's really nothing to do in this area,” said Colton Berens, a 33-year-old US Army veteran and fourth-generation farmer. As a result, not many people his age stick around. However, when Doral Renewables, an Israel-owned energy company, contacted his family in 2022 with a proposal to build a 3,200-acre (1,295-hectare) solar array on the Berens' property, Colton saw a chance for his family to benefit — as well as an opportunity to breathe life into his “young” community. The Berens' solar project would have generated about \$1m in annual tax revenue that would have been split between the county and its school for 35 years — money that could have gone a long way toward solving some of these challenges. During negotiations with his family over the use of its land, Berens said, Doral also agreed to upgrade the rugged gravel roads its crews would use during construction and to plant native grasses under the panels that could provide fodder for sheep. In late 2024, the county adopted an ordinance that requires solar panels be at least 1 mile from any occupied dwelling and 1,000 ft from a property line. These restrictions, which are stricter than the state's regulations, not only quashed the Berens' project, but stamped out almost any hope that utility-scale solar could bring this economically depressed community in the future. On the streets of nearly every North American city, there is evidence of something we have deemed a “drug crisis.” Though, to me, this is a misnomer. Because more and more people are using drugs to modulate the pain of our deteriorating society — whether those drugs come from a doctor's office or a dealer. It's just that some of us are given a safe, well-regulated, consistent, tested supply of those drugs (my amphetamine of choice, Adderall), or nearly chemically identical to street speed, but I have a doctor monitoring my intake and a government-sanctioned manufacturer supplying my doses), and others are not. Surveys have shown increased acceptance of using violence for political aims across party spectrums. On Sunday alone, there was a homicide, six motor vehicle thefts, two assaults with a deadly weapon, four robberies and more than 30 thefts, according to police statistics. Armed soldiers guarded the streets of Nepal's capital Wednesday, ordering people to stay home in an attempt to restore order after tens of thousands of protesters stormed and set fire to government buildings and attacked politicians. 1. What happened over eastern Poland? 2. Could it be an accident? 3. What does the Kremlin say? 4. Is this part of a Russian plan? 5. What does it say about Poland and NATO's air defense readiness? 6. How can NATO respond? It only got worse from there, said Dudek, who would — improbably — be named acting commissioner of the Social Security Administration, a position he held through May. In 15 hours of interviews with ProPublica, Dudek described the chaos of working with DOGE and how he tried first to collaborate, and then to protect the agency, resulting in turns that were at various times alarming, confounding and tragicomic. The DOGE team, and Bisignano, have prioritized scoring quick wins that allow them to post triumphant tweets and press releases — especially, in the early months, about an essentially nonexistent form of fraud — while squandering the chance for systemic change all an agency that genuinely needs it. If Trump wanted to endorse domestic violence decriminalization, he may take some comfort in the status quo: as it is, about 24% of adult American women have been the victims of “severe physical violence” by an intimate partner, according to the National Domestic Violence Hotline; the Centers for Disease Control, meanwhile, puts the proportion of women who have experienced “contact sexual violence, physical violence, or stalking by an intimate partner” at 41%, and many of those incidents are not reported or not prosecuted — meaning that the perpetrators are free, and that their assaults have been treated as fully “criminal.” “Unless you're a farmer, a hunter or a fisher, there's really nothing to do in this area,” said Colton Berens, a 33-year-old US Army veteran and fourth-generation farmer. As a result, not many people his age stick around. However, when Doral Renewables, an Israel-owned energy company, contacted his family in 2022 with a proposal to build a 3,200-acre (1,295-hectare) solar array on the Berens' property, Colton saw a chance for his family to benefit — as well as an opportunity to breathe life into his “young” community. The Berens' solar project would have generated about \$1m in annual tax revenue that would have been split between the county and its school for 35 years — money that could have gone a long way toward solving some of these challenges. During negotiations with his family over the use of its land, Berens said, Doral also agreed to upgrade the rugged gravel roads its crews would use during construction and to plant native grasses under the panels that could provide fodder for sheep. In late 2024, the county adopted an ordinance that requires solar panels be at least 1 mile from any occupied dwelling and 1,000 ft from a property line. These restrictions, which are stricter than the state's regulations, not only quashed the Berens' project, but stamped out almost any hope that utility-scale solar could bring this economically depressed community in the future. On the streets of nearly every North American city, there is evidence of something we have deemed a “drug crisis.” Though, to me, this is a misnomer. Because more and more people are using drugs to modulate the pain of our deteriorating society – whether those drugs come from a doctor's office or a dealer. It's just that some of us are given a safe, well-regulated, consistent, tested supply of those drugs (my amphetamine of choice, Adderall), or nearly chemically identical to street speed, but I have a doctor monitoring my intake and a government-sanctioned manufacturer supplying my doses), and others are not. Surveys have shown increased acceptance of using violence for political aims across party spectrums. Robert Page, who directs the Chicago Project on Security and Threats, wrote in the New York Times that a survey his team conducted in May was its “most worrisome yet”: “About 40 percent of Democrats supported the use of force to remove Mr. Trump from the presidency, and about 25 percent of Republicans supported the use of the military to stop protests against Mr. Trump's agenda. These numbers more than doubled since last fall, when we asked similar questions,” he wrote. “We're becoming more and more of a powder keg,” Page told the Guardian on Wednesday. Page calls the current moment an “era of violent populism.” An Irish grandmother who has lived in the US for most of her life and holds a green card is facing deportation because she wrote a bad cheque for \$25 in 2015. Over the last century, New Zealand's unique birds have disappeared at a rapid pace. Sixty-two native bird species are now extinct and more than 80 percent of the remaining birds that breed in New Zealand are at risk (New Zealand is also known by its Māori name, Aotearoa). Now, the country has started one of the most ambitious conservation projects in the world to save its threatened species. Alex Jones begs Supreme Court to hear his appeal so he doesn't have to pay Sandy Hook families \$1.4 billion	Trumpworld / Aliases	Far-right conspiracy theorist Alex Jones is asking the United States Supreme Court to review the nearly \$1.4 billion judgment levied against him and his media outlet Infowars for saying the horrific 2012 Sandy Hook Elementary School mass shooting was "staged" and a "hoax." In the appeal, which was filed last week and made public by the court Tuesday, Jones and his lawyers argue a Connecticut judge in the case was wrong to find him liable for defamation in a default ruling and not allow the merits of the case to be heard in trial to decide if he committed "actual malice."	https://tbn.tiny.us/20250911trump36

"On the brink of a devastating canal collapse, a GOP district waits for Trump's help"	Infrastructure / Environment	But the most alarming part of Burton's job with the Yakima Tieton Irrigation District - and the reason even taking Sundays off makes him anxious - is that the canal is coming apart at the seams. A year ago, the Relief Fire burned through 45,600 acres in this area, including nearly all of the canal's 12-mile route. Trees and boulders fell into the water and banged their way downhill, gouging holes in the lining. Flames warped the beams. "Exporting Brazilian coffee beans to US via third countries not an option, industry says"	Economy / Trade	Now the crisis in rural, Republican-leaning eastern Washington is posing a stark test of federal government support for critical infrastructure in the era of funding clawbacks and staffing cuts driven by the U.S. DOE's Service. The Yakima Tieton Irrigation District is hoping to replace the canal at a cost of \$240 million, far more than the small district can afford, with its 21 employees and \$6 million operating budget. The irrigation district has sought hundreds of millions in grants and loans from the U.S. Bureau of Reclamation, but the Trump administration has yet to commit to help fund the project despite appropriations from the state and bipartisan urging from its congressional delegation.	https://tbn.tiny.us/20250911coffee35	https://www.yahoo	2025-09-11	brasil, coffee, ira20250911coffee35

Senate Democrats locked in 2026 proxy war	Politics / Elections	The Trump administration launched an Immigration and Customs Enforcement (ICE) crackdown on Chicago Monday, which the city's mayor, Brandon Johnson, said he'd "received no notice" of. The launch of "Operation Midway Blitz" follows weeks of threats from President Trump to tackle crime in Chicago and other Democratic-run cities by expanding ICE's presence and possibly deploying National Guard troops as part of his agenda against undocumented immigrants despite opposition from Democratic leaders. "I think the slower job creation implies income growth was also on a softer footing even prior to the recent rise in policy uncertainty and economic slowdown we've seen since the spring," Nationwide's financial market economist Chen Khashin wrote in a note. The economy added 911,000 fewer jobs in the 12 months ending in March 2025 than first estimated, the Bureau of Labor Statistics said in preliminary revisions. The pressure is rising on Democrats to stiff President Trump and let the government shut down on Oct. 1. Plunging into a shutdown is risky for Democratic leaders, who rejected the option earlier this year. But a shutdown might be the only action that eases their deeply unaffiliated party base. Younger adults are facing the worst labor market shock in years, one far more acute than the rest of the population.	https://thn.tiny.us/20250910elections13	https://www.abc15.com	2025-09-10	senate_democrat20250910elections13

AZ inmate filed fake documents for years before officials say he used them to get out of prison	Weird world	There have been more than 400 school shootings since Columbine in 1999, according to an analysis by The Washington Post. The latest was last month, when a former student opened fire at a Catholic school in Minneapolis. Two students were killed and at least 18 other people were wounded. In the wake of those shootings, an industry has emerged to try to protect schools — and business is booming. According to the market research firm Omnia, the school security industry is now worth as much as \$4 billion, and it's projected to keep growing. The 475-foot high, 1.2 mile-long dam will more than double Ethiopia's electricity capacity to 5,000 megawatts. Almost half of Ethiopia's 130 million people lack access to electricity and even the capital Addis Ababa experiences regular blackouts. Neighboring Egypt, however, views it as nothing less than a disaster. The dam is situated on the Blue Nile, a tributary of the Nile, at Ethiopia's border with another neighbor — Sudan. Egypt worries the dam could restrict the flow of water into the desert country, leading to shortages as it depends on the Nile for 97 percent of its water.	https://thn.tiny.us/20250910ethiopia29	https://www.rptv.com	2025-09-10	ethiopia_dam_suc20250910ethiopia29
France's Macron names Sébastien Lecornu as new prime minister	World / Politics	French President Emmanuel Macron appointed his defense minister, Sébastien Lecornu, as the country's new prime minister after former Prime Minister François Bayrou submitted his resignation Tuesday morning. A Michigan judge has dismissed criminal charges against 16 people who signed false certificates saying Donald Trump won the state's electoral votes in 2020. Trump lost the state and the presidency to Joe Biden. It's the latest loss in prosecutors' efforts to hold accountable people associated with Trump's attempt to overturn his election loss. The Supreme Court said on Tuesday that it will examine whether President Trump acted lawfully when he used emergency powers to apply sweeping tariffs to a broad range of countries, a centerpiece of his economic agenda. Trump used IEEPA powers for tariffs on individual countries first announced in April in a Rose Garden event where he held up large tables detailing the tariff rates he would impose on different countries' goods. Since then, Trump has also announced these tariffs via letters posted on social media. Many of the tariffs went into effect last month. But the case does not affect Trump's sector-specific tariffs on products like steel and aluminum. Those tariffs are often called "Section 232 tariffs" after the section of the Trade Expansion Act of 1962 used to authorize them.	https://thn.tiny.us/20250910france26	https://www.rptv.com	2025-09-10	france_macron_20250910france26

Trump's SAVE system checks citizenship of millions of voters	Elections / Voting Rights	Tens of millions of voters have had their citizenship status and other information checked using a revamped tool offered by the Trump administration, even as many states — led by both Democrats and Republicans — are refusing or hesitating to use it because of outstanding questions about the system. U.S. Citizenship and Immigration Services (USCIS) says election officials have used the tool to check the information of more than 33 million voters — a striking portion of the American public, considering little information has been made public about the tool's accuracy or data security.	https://thn.tiny.us/20250910save18	https://www.rptv.com	2025-09-10	trump_elections_20250910save18

Trump's control of D.C. police set to end	Politics / Government	On Aug. 11, Trump declared a "crime emergency" in the District of Columbia, using his authority under the 1973 Home Rule Act to activate the D.C. National Guard and take control of the district's Metropolitan Police Department (MPD). But the Home Rule Act limits that power, which is meant to be used for emergencies. He can do so for only 30 days, at which point the House and the Senate would need to authorize an extension. Congress has so far not indicated that it plans to do so. The response to this development — of Wall Street buying Main Street, or at least some of its out-de-said — has been bipartisan, populist and patriotic condemnation. Both JD Vance and Kamala Harris called for bans on these corporate landlords. Since houses tend to rise in value over time, homeownership has been a primary way that middle-class families build wealth. But now private equity was outbidding aspiring homeowners, making it more expensive to buy a home and pocketing the appreciation in home values. But during the Great Recession — just before the decline of new starts in Ert's chart — the U.S. had a glut of single-family homes in foreclosure. Many were auctioned off en masse, including by the federal government, which organized auctions for investors like Blackstone and even provided a \$1 billion loan guarantee to encourage Blackstone to buy. In 2012, many government officials had welcomed firms like Blackstone into the housing market because they worried about abandoned houses and saw rental conversions as a win. Today, though, institutional investors compete with middle-class families for starter homes. Is that why homeownership has gotten more expensive? So Chang assembled and analyzed data on neighborhoods before and after corporate landlords showed up, including demographic data on the residents. His biggest finding? Institutional investors were reducing segregation. When private equity rented out homes, the new tenants tended to be lower income than the prior owners and more likely to be young and nonwhite. Most of all, Chang found that the buy-to-rent strategy was hurting the middle class. Creating rentals added lower-income families and nudged rents down. But reducing the supply of homes available for sale also pushed home prices up, hurting families on the cusp of homeownership.	https://tiny.cc/20250910dc17 https://tiny.cc/20250910housing27	https://www.rpr.c	2025-09-10	trump, dc, police, 20250910dc17
Here's what happens when private equity buys homes in your neighborhood	Economy / Housing	Some children's hospitals collectively stand to lose billions of dollars in revenue once Trump's wide-ranging tax and spending law is fully enacted, according to the Children's Hospital Association. Kids account for nearly half of enrollees in Medicaid, the state and federally financed health insurance for low-income and disabled people, and the related Children's Health Insurance Program. Meyer, though, warned that unless some cuts are reversed, Phoenix Children's would lose about \$172 million a year in payments that supplement the health system's regular Medicaid revenue, for treating low-income children covered by the insurance. Medicaid typically pays lower rates for care than commercial insurance or Medicare, the federal program for people age 65 and older. In announcing the report, Health Secretary Robert F. Two brothers have the same genetic disorder. Their insurance only covered life-altering treatment for one of them	Health / Insurance	The majority did not explain its reasoning, as is typical on the court's emergency docket. But Justice Brett Kavanaugh said the lower-court judge had gone too far in restricting how Immigration and Customs Enforcement agents can carry out brief stops for questioning. "The prospect of such after-the-fact judicial second-guessing and contempt proceedings will inevitably chill lawful immigration enforcement efforts," he wrote in a concurrence.	https://thn.tiny.us/20250910insurance14	https://www.yahoo.com/news/health-insurance-20250910insurance14	2025-09-10	health, insurance20250910insurance14
US supreme court 'effectively legalized racial profiling,' immigration experts warn	Supreme Court / Civil Rights	Drone photos of the property spurred the county to allege a series of building code violations. These citations drew Meyer into a doctored six-year fight to save his property, as Sonoma's covert cannabis surveillance operation warped into an attack on less affluent residents. For dozens if not hundreds of people, a crackdown on unlicensed cannabis crops has led to six-figure fines, forfeitures, and evictions. The result has been tears and devastation—even for folks, such as Meyer, who did not grow cannabis at all.	https://thn.tiny.us/20250909phonerevel020	https://www.yahoo.com/news/supreme-court-20250909phonerevel020	2025-09-10	supreme court, 20250909phonerevel020
"Apple to unveil new iPhone lineup"	Business & Economy	President Donald Trump on Monday posted a video to his social media account promoting the discredited theory that vaccines cause autism. The decades-old video, in part, features David Geier, who Health Secretary Robert F. Kennedy Jr. tapped this spring to investigate links between vaccines and autism, alongside his father, Dr. Mark Geier, whose medical license was suspended following claims he endangered children with autism. The anti-vaccine activists have published numerous studies on the topic and discuss some of their lies in the video, which circulated around the internet Monday after Trump shared it.	https://thn.tiny.us/20250909chinaipolcaste17	https://www.yahoo.com/news/apple-iphone-20250909phonerevel020	2025-09-09	apple, iPhone, 20250909phonerevel020
"How Silicon Valley enabled China's digital police state"	Tech & Privacy	In March, Noah received pioneering gene therapy to improve his mobility and quality of life through Allison's health insurance plan. But when Hunter's application was submitted in late May, authorization for exactly the same treatment was denied. "The reason on our denial letters is that it's not medically necessary," the mom-of-three said from her home in Winnetka, just outside Chicago. "It was very blindsiding. "HHS responds to report about autism and acetaminophen"	Health / Science	There is no credible scientific evidence that acetaminophen causes autism or that leucovorin (a derivative of folic acid) can prevent the disorder, as the HHS report purportedly will suggest, according to reporting by the Wall Street Journal. In fact, those in the medical community, including the Society for Maternal-Fetal Medicine, said in a statement that acetaminophen is safe and recommended for use in pregnancy, especially to treat fever and pain. "Untreated fever, particularly in the first trimester, increases the risk of miscarriage, birth defects, and premature birth, and untreated pain can lead to maternal depression, anxiety, and high blood pressure," the society said in its statement. The survey of 1,700 companies, conducted by Mercer, a benefits consultant, indicated that employers are anticipating the sharpest increases in medical costs in about 15 years. Higher drug costs, rising hospital prices and greater demand for care are all contributing factors, experts said.	https://ttn.tiny.us/20250908health10	2025-09-08	HHS, Autism, Aci 20250908health17
"Health Care Costs for Workers Begin to Climb"	Health / Economy	Without making any changes to benefits — which would involve moves like shifting more costs to workers or reducing benefits — employers said they expected next year's increases in health costs to reach nearly 9 percent on average. By altering plans, they projected increases overall of 6.5 percent on average in health costs next year. There have been some attempts to crack down on the centres and rescue the workers, who can be subjected to torture and trapped inside. But drone images and new research shared exclusively with the Guardian reveal that the number of such centres operating along the Thai-Myanmar border has more than doubled since Myanmar's military seized power in 2021, with construction continuing to this day.	https://ttn.tiny.us/20250908climate61	2025-09-08	China, Energy, G 20250908climate61

After the first changeover, he reappeared on the big screen and stayed up there for a while — causing fans to boo even longer until the camera cut away. 		We saw doctor after doctor, checking off a long list of what it wasn't. No one could tell us what it was. I don't think the delay was only because of how medically complex his condition was — though I certainly was that. I believe part of it came from something more human: the deep reluctance to give a younger person a diagnosis as final as a terminal brain disease. Eventually, he was diagnosed with primary progressive aphasia, a rare neurodegenerative condition that initially affects language skills. It is a form of frontotemporal dementia, or FTD. It is also a death sentence. FTD is the leading cause of dementia for those under age 60, and it is an inescapably cruel disease, decimating lives and often masquerading as something else completely. It can mimic psychiatric conditions like psychosis or even something as generic as depression and anxiety. There is no cure for it. No treatments.	https://thn.tiny.us/20250908health33

Why Some Illinois Farmers Are Stuck Raising Crops That No Longer Thrive — ProPublica	Climate / Agriculture	It was June 2024, and both father and daughter knew the land they were trying to farm wasn't going to yield much, even if they got the seeds in the ground. But this had become their routine: farming fields and just to keep from going under. For years now, they'd had one foot stuck in the mud, the other in government bureaucracy. They'd get angry — then laugh.	https://thn.tiny.us/20250905climate90	https://www.propublica.org/article/why-some-illinois-farmers-are-stuck-raising-crops-that-no-longer-thrive	2025-09-05	illinois, farming, c 20250905climate90
US prosecutors sue Southern California Edison over wildfires in LA County, Inland Empire	Climate / Disasters	In these Mississippi River bottoms, federal farm policy became a trap. Farming is one of the most heavily subsidized industries in America. Each year, Congress allocates billions to keep crops in the ground, cushioning the blow from droughts, floods, fires and market swings — a safety net that dates to the 1930s, when the Depression and Dust Bowl put the nation's food supply at risk.	https://thn.tiny.us/20250905climate27	https://www.latimes.com/story/2025-09-05/us-prosecutors-sue-southern-california-edison-over-wildfires-in-la-county-inland-empire	2025-09-05	wildfires, californi 20250905climate27
A hurricane could be in the Caribbean next week. What the forecast models show about its threat to US	Climate / Disasters	But today, in some of the most flood- and drought-prone parts of the country, those programs can also keep people hanging on, even when it makes more sense to walk away. That's increasingly clear along parts of the Mississippi River Valley and especially here in Alexander County, at the rural tip of Illinois. 		Today's hearing was always going to be tumultuous. Although the panel was pitched as an opportunity to hear about President Donald Trump's health-care agenda, it was a rare opportunity for senators to publicly question the secretary about his recent attacks on the U.S. vaccination system. In the past 20 days, Kennedy has terminated mRNA-research grants, stifled a CDC advisory panel with anti-vaccine advocates, and propped up unproven treatments during a deadly measles outbreak. Last week, he pushed out CDC Director Susan Moniz, whose senators had confirmed to her position less than a month prior. Lawmakers, understandably, were displeased. In today's hearing, Kennedy claimed that Moniz had told him that she was untruthfully after taking the job, so that Republican Senator Thom Tillis replied, "I would suggest in the interview you ask them if they're truthful, rather than four weeks after we took the time of the U.S. Senate to confirm the person."	https://nhr.tiny.us/20250905congress71	https://www.wapo.us/20250905congress71	2025-09-05	rfk, congress, h	20250905publichealth67
A Different RFK Jr. Just Appeared Before Congress - The Atlantic	Public Health — Politics	This sort of aggression from a Cabinet secretary could seem like political suicide. The lawmakers Kennedy was chiding not just have the power to investigate his work at HHS, they also control the funds he needs to keep his agency running. But Congress has never removed a Cabinet secretary from office. And even if some Republican senators are starting to take concerns, one very prominent Republican still seems to remain in Kennedy's corner: Earlier this week, Trump questioned the value of COVID vaccines and the massive effort that his first administration orchestrated to bring them quickly to the public in 2020. "I hope OPERATION WARP SPEED was as BRILLIANT as many say it was," he wrote on Truth Social. RFK Jr. prepares for blue state battle over vaccine restrictions	Public Health — Vaccines	Blue states are quickly moving to defy Health Secretary Robert F. Kennedy Jr.'s vaccine restrictions, increasing the likelihood of a patchwork of conflicting policies resemble to the divides over abortion and gender-affirming care. The resulting standoff could confuse the public on potentially life-and-death decisions. And a state-by-state approach could be inadequate in a major crisis. "Any public health response that is dependent on a patchwork of state actions is going to necessarily be less effective and less efficient" than a federal policy, said Samuel Ekgamitos, who was general counsel to the Department of Health and Human Services in the Biden administration. Cassidy had exacted assurances from Kennedy during his confirmation process in February that he would not restrict Americans' access to vaccines, a promise the senator now accuses Kennedy of violating. Kennedy fired the entire 17-member Advisory Panel on Immunization Practices at the Center for Disease Control and Prevention, replacing them with members Cassidy argued are largely unscientific vaccine skeptics with vested financial interests in suing vaccine makers. Ghost sharks' grow forehead teeth to help them have sex, study suggests	Weird world	He claims that in the last eight years, his business account has been shut down five times — costing him some \$11,000 in ad funds — and his personal account has been taken down four times. Male "ghost sharks"—eerie deep-sea fish known as chimaeras that are related to sharks and rays—have a strange rod jutting from their foreheads, studded with sharp, retractable teeth. New research appearing in Proceedings of the National Academy of Sciences reveals these are not merely localities, but real rows of teeth that grow outside the mouth. What's more, the toothy appendage is likely used for mating. Found only in males, the forehead rod—called a tenaculum—is the ghost sharks' only source of distinct teeth, and it seems to be used to grasp females in much the same way sharks use their toothy mouths in mating.	https://thn.tiny.us/20250905/science01	https://giphy.org/	2025-09-05 ghostsharks, sci 20250905science101

		Kennedy appears to be taking a victory lap. In an op-ed published yesterday in The Wall Street Journal, the health secretary exorciated the CDC he took over as dysfunctional and politicized. Now, he argues, thanks to his leadership, the CDC is on the right track. As evidence, he cited its response to the measles outbreak, which claimed the lives of two unvaccinated girls who were members of the same Mennonite church. "When measles flared this year in Texas, we brought vaccines, therapeutics and resources to the epicenter. The outbreak ended quickly, proving the CDC can act swiftly with precision when guided by science and freed from ideology," Kennedy wrote. "That response was neither 'pro-vax' nor 'anti-vax.' It wasn't distracted by 'equity outcomes' or politically correct language like 'pregnant people.' It was effective."	https://thn.tiny.us/sep04politics08				
		Much of that is misleading. Far from ending quickly, the outbreak in West Texas lasted from January to August and fed a measles surge that spread to 41 states—the country's worst since 1992. The CDC documented 1,431 cases nationwide, though health officials say many of those who contracted measles were never tested and therefore weren't counted. More than 100 children and teenagers were hospitalized. As for the "swift" response, although the CDC did send researchers to the area in early March after the first death, a recent story published by KTF Health News documents early confusion and silence from the federal government. On February 5, the public-health director in Lubbock, Texas, wrote in an email, "My staff feels like we are out here all alone."	https://thn.tiny.us/sep04politics01	https://www.yahoo.com	2025-09-04	RFK Jr., CDC, Po	sep04politics08

Pollution, development and climate change threaten Florida's freshwater springs	Environment / Climate	Seen from the air, a Florida freshwater spring is a bit of liquid heaven, luring humans and wildlife to enjoy its aquamarine cool. With at least 1,000 of them — more than any other state — the springs serve as beaches for large swaths of central and northeastern Florida far from the ocean, with teenagers backflipping from docks and snorkelers peering into the crystalline depths. 		The Trump administration agreed to restore scores of health agency webpages and datasets that went dark to comply with executive orders on diversity, equity and inclusion and gender identity, under a court settlement announced on Tuesday. The information blackout shocked health providers and centered on issues like contraception and transgender health that President Trump and Republicans have repeatedly targeted. It also swept up information about HIV, at-risk youths and women's health. The action prompted a lawsuit from nine medical groups who alleged the administration's actions were arbitrary, illegal and threatened public health.	https://thn.tiny.us/SEP3-trump-admin

O'Neill's résumé breaks sharply with CDC tradition. A Bush-era HHS official turned Silicon Valley investor, he is neither a physician nor a scientist — an unusual profile for the agency's top post. He is expected to retain his deputy role at HHS while leading the CDC. After his early government service, O'Neill spent nearly two decades in close partnership with billionaire Peter Thiel, managing his funds, directing the Thiel Foundation, and co-founding the Thiel Fellowship. He also led the SENS Research Foundation, a nonprofit focused on anti-aging science. In June, he returned to Washington as deputy secretary. CDC's new acting director Jim O'Neill faces looming decisions on vaccines	Health / Government	Kenya's first major outbreak, many countries — from Ghana to Burundi, from Uganda to South Sudan — have dealt with mpox for the first time. Today, 26 African countries are in the midst of mpox outbreaks, up from 13 a year ago according to Africa CDC. And, while recent estimates suggest cases are dropping in several key countries, Africa CDC says, there have been over 100,000 suspected mpox cases so far this year. Critics say the global response has fallen dangerously short, expressing frustration and fear that the world has not acted more swiftly to contain the virus. These critiques come despite the fact that \$1.1 billion has been pledged by countries, foundations and international organizations to support mpox control. Here is a look at where the mpox crisis stands and what that means for future outbreaks of other serious diseases.	https://thn.tiny.us/SEP3-mpox-faded	https://www.cbs2	2025-09-02	CDC, Jim O'Neill, Vaccines, Government, Health
Mpox has faded from headlines. Is it still a threat?	Health / Infectious Disease	Independent rural hospitals are increasingly joining what are called clinically integrated networks, collaborative groups that allow them to avoid selling out to larger health systems while sharing resources to save money and improve patient care. Many are motivated by the chance to combine their patient rolls for value-based care contracts, a growing reimbursement model in which insurers pay providers based on the quality of care they provide and the health outcomes of their patients. Supporters of the networks are exploring whether funding from the \$50 billion Rural Health Transformation Program — part of President Donald Trump's recent tax and spending bill — can be used to help start or expand such organizations.	https://thn.tiny.us/SEP3-rural-hospitals	https://www.rpr2	2025-09-02	Mpox, Infectious Disease, Health, Africa, Public Health

Before I say what they are, I should thank you and say, if you're on a battlefield, this synthetic nanoparticle is going to be the way to go always. You freeze-dry it and you rehydrate it on the battlefield with drinking water, and that's it. Right now, in Ukraine, blood is a real crisis because you have to keep it cold. And aerial surveillance drones can see the generator that you're using to keep it cold, and they will bomb that. So the heat signature of the infrastructure to keep blood even anywhere near the front lines is making hospitals a target. And so they're not able to have blood. So for military purposes, synthetic freeze-dried blood is the way to go. Yes, more of us should give blood. But also, we know that even a five-minute delay in giving someone blood reduces their chances of survival. It's like CPR. You wouldn't wait to start CPR until you get to the hospital. We all know that you have to start it right away. Same with blood: You should give blood as soon as you can. Plants prioritize immunity over growth during recovery from drought conditions	Science / Environment	A plant's number one priority is to grow—a feat that demands sunlight, nutrients, and water. If just one of these three inputs is missing, like water in a drought, growth halts. You might then think that at the end of that drought, the plant would jump right back into growing. Instead, its priorities shift. Sak plant biologists used advanced single-cell and spatial transcriptomic techniques to look closely at how a small, flowering plant called Arabidopsis thaliana recovers after drought. They discovered that immunity became the plant's number one priority during this post-drought period, as they watched immune-boosting genes light up rapidly throughout the Arabidopsis leaves. This supercharged immune response, dubbed "Drought Recovery-Induced Immunity" (DRII), also occurred in wild and domesticated tomatoes, suggesting that prioritizing immunity is conserved evolutionarily and likely takes place in other important crops. Many jobs are seeking 'AI literate' candidates — but what does that actually mean? The Independent	Tech / AI	There's not some universal standard for AI fluency, unfortunately," Hannah Cathoon, vice president of AI job search company Indeed, told The Washington Post in a recent article. Doctors have successfully developed an artificial intelligence-led stethoscope that can detect three heart conditions in 15 seconds. The new stethoscope developed by researchers at Imperial College London and Imperial College Healthcare NHS trust can analyze tiny differences in heartbeat and blood flow undetectable to the human ear, and take a rapid ECG at the same time. Details of the breakthrough, which could boost early diagnosis of the three conditions, were presented to thousands of doctors at the European Society of Cardiology annual congress in Madrid, the world's largest heart conference.	https://thn.tiny.us/SEP02-many-jobs	https://www.indeed.com/	2025-09-02	AI, jobs, technology

Palantir, an AI company with close ties to Trump, just inked a \$10 billion contract with the U.S. Army. This is the new norm. Hits everything, everywhere. Most new technologies unfold slowly and narrowly. AI is advancing rapidly every few months and hits everything, everywhere. Not only is a relatively poor and service vulnerable to AI, so is every step and part of producing and providing it. Threatens job apocalypse. When the internet was rising, its builders didn't predict wiping out half of entry-level white-collar jobs. Daniel Amodei, CEO of Anthropic, one of the hottest AI companies, told us that's a distinct possibility. Others disagree. But a very public debate about massive job losses warrants the obsession of policymakers, the media, and... and you. The secret business conversations. We're unique in that we write a column and run a business, and talk to CEOs constantly. We can tell you that many companies' internal budget conversations are heavy on jobs that won't exist in 18 months. Yes, we believe new ones (that we can't even imagine today) will emerge. But right now, it's about savings and automation. At Anthro, we're demanding all workers get AI-savvy immediately so they can survive the change — then thrive. But many employers remain silent about what's coming. You speak AI. "Trump tariffs and the Fed: Fate of U.S. economy may lie with the Supreme Court"	Economy / Courts	Two of President Trump's key economic policies appear headed for the Supreme Court: high global tariffs and his unprecedented firing of a Federal Reserve board member. What it could mean for the Fed to lose its independence	Economy / Federal Reserve	President Donald Trump's attempt to fire a member of the Federal Reserve's governing board has raised alarms among economists and legal experts who see it as the biggest threat to the central bank's independence in decades. The consequences could impact most Americans' everyday lives. Economists worry that if Trump gets what he wants — a loyal Fed that sharply cuts short-term interest rates — the result would likely be higher inflation and, over time, higher borrowing costs for things like mortgages, car loans and business loans.	https://thn.tiny.us/Sep-1-what-3	https://www.abc	2025-09-01	Federal Reserve, Economy, Trump	
Trump's Plan to Pack the Fed With Loyalties	Economy / Federal Reserve	That kind of power is desired by Mr. Trump, who has for months harangued the Fed to lower borrowing costs and has made little secret that he would like Jerome H. Powell, the Fed's chair, to resign. But until August, the chances that Mr. Trump could so swiftly gain a majority of support on the board seemed far-fetched. The president's first big break came when Adriana D. Kugler hastily stepped down months before her term as a governor was set to end. The president tapped Stephen I. Miran, a vocal critic of the Fed who most recently served as one of Mr. Trump's top economic advisors, to take Ms. Kugler's place. He could be confirmed by the Senate in time for the Fed's next policy meeting in September. Mr. Trump's second break could come if the courts are persuaded that he is allowed to remove Lisa Cook, a governor, over allegations that she committed mortgage fraud. The law stipulates that a president can fire a member of the board only "for cause," which is interpreted to mean professional neglect or malfeasance. Ms. Cook, who has not been charged with any crime or convicted of any wrongdoing, filed a lawsuit on Thursday against Mr. Trump seeking to retain her position. Her lawyers have argued that the allegations are not enough to meet the "for cause" test.	https://thn.tiny.us/Sep-1-trump-s-2	https://apnews.c	2025-09-01	Trump, Federal Reserve, Economy	
US labor force lost 1.2M immigrants, preliminary data shows	Economy / Immigration	As parades and other events celebrating the contributions of workers in the U.S. are held Monday for the Labor Day holiday, experts say President Donald Trump's stepped-up immigration policies are impacting the nation's labor force. More than 1.2 million immigrants disappeared from the labor force from January through the end of July, according to preliminary Census Bureau data analyzed by the Pew Research Center. That includes people who are in the country illegally as well as legal residents. Immigrants make up almost 20% of the U.S. workforce and that data shows 45% of workers in farming, fishing and forestry are immigrants, according to Pew senior researcher Stephanie Kramer. Trump's attempts to lure companies away from China are backfiring	Economy / Trade	It's echoed in a survey by the U.S.-China Business Council, released in July. "CDC workers told to return to office on September 15, weeks after gunman attacked headquarters"	Health / CDC	Workers at the US Centers for Disease Control and Prevention have been told to return to the office September 15 — a little over a month after a gunman attacked the agency's Atlanta campus, firing almost 500 shots and killing a police officer before dying of a self-inflicted gunshot wound. The push for workers to return to the office was shared in an email to staff, a Health and Human Services spokesperson confirmed. The announcement comes just weeks after the August 8 attack left CDC staff reeling, with one staffer saying employees felt like "sitting ducks" as the shooter unloaded hundreds of bullets, around 200 of which struck six CDC buildings, leaving bullet holes in windows.	https://thn.tiny.us/Sep-1-cdc-chaos	https://www.abc	2025-09-01	CDC, COVID-19, Vaccines

"These are the conditions that make you eligible for an updated Covid-19 vaccine"	Health / COVID-19	Use of immunosuppressive drugs Americans across the political spectrum support efforts to increase food regulation, a major priority for Health Secretary Robert F. Kennedy Jr. — but there's a partisan split over his views on childhood vaccines. Kennedy's push to improve Americans' food supply has significant support from voters across the political spectrum. A whopping 87% of respondents in an Axios-Ipsos survey conducted in June said the government should do more to make sure food is safe. 90% said it should be easier for the average American to understand food safety guidelines, something Kennedy has said he's working on. 63% of Democratic and Democrat-leaning voters said it's extremely or very important that parents get their kids vaccinated, and another 6% called it somewhat important. That's compared to 52% of Republican and Republican-leaning voters who said childhood vaccination is extremely or very important, though another 26% said it was somewhat important. An ultra-conservative radio host attacked Robert F. Kennedy Jr. on Thursday, saying that his sick wife is unable to receive a COVID-19 vaccination because of the policies of the secretary of health and human services. Yet some health experts believe Cassidy deserves blame for what's happening as a physician in an important leadership position who was concerned about Kennedy's vaccine views but voted to confirm him anyway. As such, Cassidy needs to do more than oversight said Dr. Thomas Farley, the former top public health official in New York City and Philadelphia. A top official at the Food and Drug Administration (FDA) demanded the removal of YouTube videos of himself that were published by a physician and writer who has been critical of medical misinformation and public health officials in the Trump administration, according to a YouTube notice that was seen by the Guardian. The now-defunct channel contained about 350 videos of doctors and commentators, including Prasad, Robert F. Kennedy Jr., the secretary of health and human services, and Jay Bhattacharya, the head of the National Institutes of Health, which had been collected by Howard from their social media accounts, interviews and protests. Creating the channel, Howard told Guardian in an interview, had been an attempt to "preserve" what these individuals had said during the early years of the pandemic, including comments that Howard said exaggerated the dangers of the Covid vaccine to children and — in some cases — reversed the role of Covid infection, among other issues.	https://tiny.cc/Sec1-rfk-p-2	https://www.yahoo	2025-09-01	COVID-19, Vaccines

With CDC in chaos, scientists and physicians piece together backups	Health / Public Health	But even before CDC Director Susan Moniz was fired, some organizations started pursuing new ways to do jobs formerly handled by the CDC. Some are working to preserve longstanding vaccination recommendations. Some are trying to release information that CDC has stopped providing. Others aim to maintain health data collections at risk of being lost. But these outside efforts don't have the federal funding, resources, legal mechanisms or platform that have been the underpinning of the nation's public health system. As noble as they are, these patchwork efforts probably won't cut it, some experts say. 		No one should want federal bureaucrats poring over loan documents and consistently prosecuting all falsehoods. There are, of course, some mortgage-fraud cases in which perpetrators knowingly commit a serious transgression, and the cost to lenders can be high. In a 2021 research paper, Ronel Eul of the Federal Reserve Bank of Philadelphia found that some real-estate investors use occupancy fraud—misrepresenting themselves as owner-occupants—to obtain lower mortgage rates than they otherwise could get, and that they default at a higher rate than other investors. Such fraud is "broad-based," Eul and his co-authors write. They find that these fraudulent borrowers make up one-third of the population of investors seeking mortgages. Four ominous trends tearing America apart	Politics / Extremism	Four concurrent trends suggest America's volatile politics, culture and security could worsen in the months ahead. With Charlie Kirk's saying, we've witnessed more high-profile assassinations or assassination attempts in the past 14 months — including two assassination attempts on President Trump, the killing of a Democratic Minnesota lawmaker and an arson attack on the residence of Pennsylvania Gov. Josh Shapiro (D) — than at any point since 1986, when the nation lost the Rev. Martin Luther King Jr., then Robert F. Kennedy just two months later. School shootings — including one near Denver about the same time that Kirk was shot — continue to surge, from fewer than a dozen annually 20 years ago to 30+ annually for the past three years. Calls for violence and civil war are spreading across social media, amplifying the worst of humanity as Americans denigrate each other for their political beliefs. Pete Hegseth wants women in the kitchen — but his wife as his top adviser	Politics / Gender	During his Senate confirmation hearings in January, his ex-sister-in-law submitted an affidavit begging senators not to confirm him, claiming he's a misogynist who abused his second wife. She wrote that she heard him "say that women should not have the right to vote and that they should not work." The House Republican risking GOP backlash to save Obamacare subsidies	Politics / Health Policy	This all makes it very surprising — and confounding — that Hegseth's top adviser appears to be Jennifer Hegseth, his current wife and a former Fox News producer. Press coverage of this marital-power arrangement leans on euphemisms like "unorthodox" or that it "draws scrutiny," but that underplays how frankly weird it is for the defense secretary to have his wife constantly at his side, managing his affairs and advising him on military matters, even though she is not on the Pentagon payroll and she has no experience with the military. Supreme Court lets Trump fire FTC official as it weighs president's powers	Courts / Power Grab	In an emergency order Monday, the U.S. Supreme Court allowed President Trump to fire Rebecca Slaughter, the last remaining Democratic member of the Federal Trade Commission. The court's action is technically temporary, since the justices said they will hear arguments in the case in December, but every indication is that the conservative court majority will use the case to reverse a major Supreme Court precedent that dates back almost a century. Schools in Oklahoma are being warned they risk 'violating the law' if they don't establish a Turning Point USA chapter on campus	Education / Culture Wars	A leading MAGA education official has announced plans to establish chapters of Turning Point USA, the conservative organization founded by slain MAGA influencer Charlie Kirk, in every high school across his state. Oklahoma State Superintendent of Public Instruction Ryan Walters unveiled the proposal on Tuesday and warned schools would be punished if they refused to take part. "For far too long, we have seen radical leftists with the teachers union dominate classrooms and push woke indoctrination on our kids," Walters said in a video posted to social media. Rise of the new radical internet	Extremism / Online Platforms	White promoters and headlines have traditionally zeroed in on Instagram, Facebook, YouTube, TikTok and X, young people are increasingly gathering on gaming platforms — and having conversations that are typically anonymous and largely invisible to the outside world. Right-wing extremist violence is more frequent and more deadly than left-wing violence - what the data shows	Extremism / Violence	Extremist groups that have been booted from mainstream platforms have found new homes in gaming and gaming-adjacent spaces. Unlike public-facing apps like Instagram and TikTok, users of these apps are much more accustomed to using pseudo-identities to connect, making it easier to share radical and taboo ideas anonymously. But policymakers and the public need reliable evidence and actual data to understand the reality of politically motivated violence. From our research on extremism, it's clear that the president's and Miller's assertions about political violence from the left are not based on actual facts. Based on our own research and a review of related work, we can confidently say that most domestic terrorists in the U.S. are politically on the right, and right-wing attacks account for the vast majority of fatalities from domestic terrorism.	https://www.thn.tiny.us/20250923extremisdata	2025-09-23	Extremism, Viol 20250923extremisdata

How to overcome hurdles and start a wellness strategy	Health / Lifestyle	Klicko, who himself has autism, said in an interview with Morning Edition that the administration is talking about autism as though its “existence is some sort of plague.” He argues moves supported by the administration, including cuts to Medicaid following the passage of the One Big Beautiful Bill Act, may only make it harder for autistic people to get support they need. People with autism and other intellectual disabilities disproportionately rely on Medicaid, according to health policy research group KFF, and those who rely on a range of long-term care options and face challenges getting private health coverage could be affected by spending cuts to the program over the next decade.	https://www.wellness-journey.com/health/tylenol-experts-20250923tylenolexperts	Sept 25, 2025	wellness, health, fitness 20250925wellness

Republican Physician Immediately Trashes Trump's Autism Claim	Health / Policy	U.S. Sen. Bill Cassidy, whose support was pivotal at RFK Jr.'s confirmation as Secretary of Health and Human Services, has contradicted President Trump and Sen. Bobby J. to share their work. This week, the Trump administration announced that it was taking “bold action” to address the “epidemic” of autism spectrum disorder — starting with a new safety label on Tylenol and other acetaminophen products that suggests a link to autism. The scientific evidence for doing so is weak, researchers said.	https://thn.tiny.cc/20250923autismclaim	https://www.yahoo.com/health/tylenol-experts-20250923tylenolexperts	2025-09-24	Trump, Autism, Health, Republicans 20250924gopdoctorautism

Before the U.S. began universally vaccinating newborns in 1991, some 18,000 children a year would be infected before the age of 10. About half of them died from mother-to-child transmission, Pavia says. Giving newborns the shot right after birth prevents the virus from taking hold. Trump demands Venezuela take action on one of his most outstanding claims – or face an 'incalculable' price The Independent	International / Americas	At Heathrow 90% of more than 350 flights had been delayed by 15 minutes or more, while six were canceled by 3pm on Sunday afternoon, according to the data company Flightradar24. The average delay was 34 minutes. Thirteen flights were canceled on Saturday, although the vast majority of hundreds of flights were delayed. President Donald Trump demanded the Venezuelan government accept the return of "all of the prisoners" he claims the country has forced into the U.S., or face an "incalculable" price. Critics of the president also mocked his outburst on Truth Social and suggested Trump misunderstood the definition of "asylum."	https://thn.tiny.us/2025/09/22/venezuelathreat	https://www.thegu	2025-09-22	Trump, Venezue	20250922venezuelathreat	
Palestinian state recognition sparks Republican criticism	International / Middle East	A series of voices on the left condemned the formal recognition of a Palestinian state by the UK, Canada and Australia on Sunday. The decision by the three nations has put President Trump — at odds with close U.S. allies, as several other countries, including France, are expected to recognize the State of Palestine during the upcoming U.N. General Assembly. The Palestinian president, speaking over video after the United States revoked his visa, told world leaders Thursday that his people "reject" the 2023 Hamas attack on Israel and pledged that the militant group would have no role in governing Gaza after war ends and must hand over its weapons.	https://thn.tiny.us/2025/09/22/palestinianrecognition	https://www.foxb	2025-09-22	Palestine, Repub	20250922palestinianrecognition

He was bulldozed to death when Atlanta cleared his homeless camp. Will there ever be justice? Atlanta The Guardian	Justice / Inequality	At first, the police tried to claim in a report that Taylor was not badly injured, that he only had a "bloody nose" with no other "obvious signs of physical hurt". Instead, they speculated that he had died of a drug overdose. But Taylor was already dead by the time an ambulance arrived. The autopsy report, released 10 weeks later, found he died of blunt force trauma; his spleen and liver had been lacerated and his pelvis was cracked in half. Atlanta Mayor A. Pentagon restricts speaking engagements alongside media crackdown	Military / Censorship	Defense Secretary Pete Hegseth in a memo this month cemented restrictions on when, where and how the military and Pentagon leaders can engage with the public, noting that past "external engagements have tended to cancel out certain types of institutions." Trump administration eyes USAID money to advance America First goals	Politics / Foreign Policy	Kronz is well-acquainted with the ways political strongmen rely on women's labor at the family level to implement state ideology. Her 1980 book, Mothers in the Fatherland, describes how the ordinary women of Nazi Germany "operated at its very center", incubating ideals of white supremacy, female subordination and sacrifice at home. A woman's "most glorious duty is to give children to her people and nation, children who can continue the line of generations and who guarantee the immortality of the nation", Joseph Goebbels, the Nazi propagandist, told an audience of women in 1933. Racially selective population growth was core to the agenda of such nationalist, fascist regimes as Nazi Germany and Benito Mussolini's Italy. The only path to honor for most women was birthing children, formalized through financial rewards and medals for prolific mothers. Similarly, the Trump administration touts pronatalist rewards, such as a \$1,000 government-funded investment account for new babies, and has discussed others, including a "National Medal of Motherhood" for women with six children. While vice president JD Vance cried: "I want more babies in the United States of America!" at an anti-abortion rally in early 2025, Republicans in Congress plotted eliminating federal tax credits for daycare and other supports that enable women's workforce participation — an effort to control women's social roles.	https://tfn.tiny.cc/20250925magadown	Sept 25, 2025	Trump, USAID, America First	20250925usaaidmoney

'People are scared s--less': Noem's right-hand man sows fear among DHS staffers after exploding over press reports in meeting The Independent	Politics / Governance	At least 14 immigration judges learned last Friday that they would be put on leave and that their employment would terminate as soon as Wednesday in some cases, according to two people familiar with the firings and a confirmation from the International Federation of Professional and Technical Engineers (IFPTE), a union that represents immigration judges. The two people spoke on condition of anonymity for fear of reprisals. Courts in Florida, New York, Maryland, California and Washington state are among those affected.	https://tfn.tiny.cc/20250923hushowrisk https://www.npr.o	2025-09-24	Trump, Shutdown	20250923hushdownrisk	
Trump cancels meeting with Democrats as prospects for shutdown increase : NPR	Politics / Governance	Hundreds of federal employees who lost their jobs in Elon Musk's cost-cutting blitz are being asked to return to work. The General Services Administration has given the employees — who managed government workplaces — until the end of the week to accept or decline reinstatement, according to an internal memo obtained by The Associated Press. How RFX Jr. Could Eliminate Vaccines Without Banning Them - The Atlantic	Politics / Health	But since the start of this year, when Robert F. Kennedy Jr.—one of the nation's most prominent anti-vaccine activists—took charge of the Department of Health and Human Services, the federal government has signaled that it is no longer a reliable partner in the business of vaccines. The Trump administration has fired vaccine experts, tightened vaccine regulatory policies, restricted vaccine recommendations, and spread misinformation about vaccines' harms. It has halted its funding of Gavi. It has canceled hundreds of contracts for vaccine research across multiple agencies. Even before the change in policies that are being implemented now, vaccines were a difficult business, Andrew W. Lo, an economist at MIT, told me. 		2. A once-in-a-generation shift in how our realities are formed. Stop thinking about news as a way to understand the world. Instead, look in on the ways information inputs — the shards of glass — shape our individual realities. The very act of writing about individual-based realities would have seemed nonsensical a decade ago. 'I think we're headed to a shutdown': What a government stoppage could look like	Politics / Shutdown Standoff	What we are witnessing is a blend of hostile actors with different groups using the same system for their own ends. On one side, you have organized crime groups and their fraud syndicates that monetize scale through phishing, account takeovers, bank payment fraud, and spam. For them, a "sift farm" is infrastructure, one that is cheap to run and efficient for moving money or making activity. Then there are the criminal "service providers" and resellers, the middlemen who build the boxes, lease still points, and sell anonymously to anyone willing to pay. Transnational organized crime with both financial and tactical goals may also use these systems to run command-and-control and move communications across borders. Marshall sketches possible ACA subsidy compromise	Politics / Health Policy	Extending the subsidies is Democrats' top demand in exchange for avoiding — or ending — a government shutdown. Fully MAGA-fied Christianity	Religion / Politics	Within this world exists a subculture that includes the so-called Theodolites, men who often identify as Christian nationalists who see themselves as theological warriors. In this subculture, compassion is viewed as a weakness, bullying and abusive language, snide putdowns, misogyny, and "owning the libs" are fashionable. They're the Christian version of shock jocks. Many of the leaders within the Christian-MAGA movement are autocratic, arrogant, and controlling; they lack accountability, demand unquestioned loyalty, and try to intimidate their critics, especially those within their church or denomination. The grievances and resentment they feel are impossible to overstate; they are suffering from a persecution complex. Fully MAGA-fied Christians view Trump as the "ultimate fighting machine," in the words of the historian Kristin Kobes Du Mez, and they love him for it. The most militant and fanatical Trump supporters refer to our era as a "Biblicofied moment." (The phrase is meant to draw parallels between the "woke left" in America and Nazism.) Hard-core MAGA Christians hardly make up the whole of American evangelicalism and fundamentalism, but they do constitute a large part of it, and they are on the ascendancy.	https://thn.tiny.us/20250930democracyrace	https://www.abc2.com	2025-09-30	Christian national, 20250930magachristianity
The Race to Save America's Democracy	Politics / Democracy	Donald Trump likes to say he doesn't actually lose elections—only the "rigged" ones. Such comments are not mere bluster, like the president's boasts about golf. They are threats to democracy, which is more fragile than many Americans may realize. Although Trump himself may operate on instinct, his more disciplined advisers are masterminding a steady accumulation of power. The very bedrock of American democracy—free and fair elections—is under threat. Already there is talk of redrawing district maps, banning mail-in ballots and electronic-voting machines, and rewriting voting rules. If the administration is allowed to continue on this path, Americans should not take the integrity of next year's midterms for granted. But rangers say the real crisis is happening beyond the trails and campgrounds, where visitors can't see it. Park employees' experiences, which several people described to me and dozens more have shared publicly, suggest that the Department of the Interior sacrificed long-term stewardship of American lands to maintain a veneer of normalcy for this summer's crowds. "We are really pulling out all the stops to make sure that the impacts are being hidden," an emergency-services ranger in the western United States told me.
